Introduction

The **User Console** serves as the conduit that connects elements of Analysis and Reporting with the BA Repository to provide you with easy and fun tools for creating and sharing reports and dashboards.

Prerequisites

Before you can work with the User Console, you will have to have *installed* the Pentaho software and *configured* the BA Server.

Expertise

The topics in this section give you in depth details on how to use the **User Console** to create and customize reports and dashboards for your business needs.

Tools

We provide a web application, the **User Console**, which you use to create reports and dashboards.

Tour the Pentaho User Console

The **Pentaho User Console** is designed to be intuitive to users who are familiar with regular file managers like Windows Explorer, and Web browsers like Firefox.

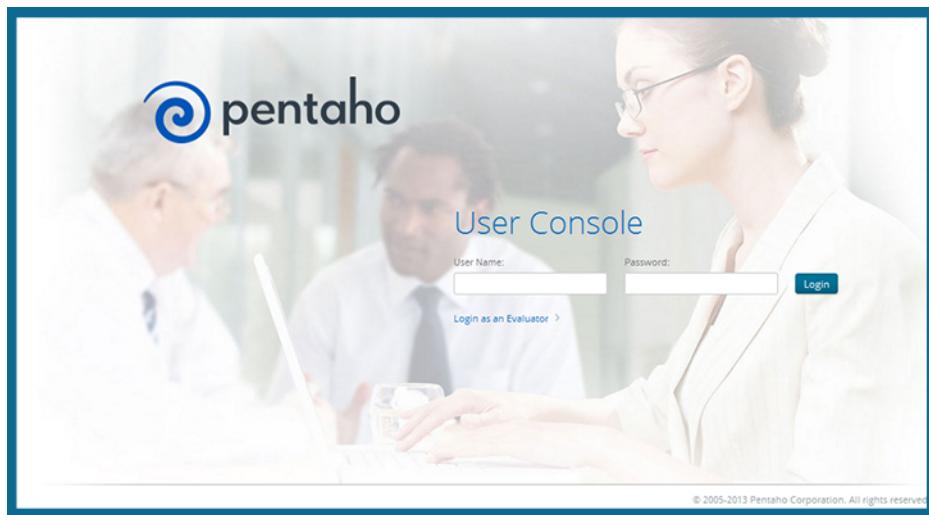

These sections take you on a tour of the User Console pages, showing you controls and the different things that you can do on each page.

- [Login to the User Console](#)
- [Home](#)
- [Browse Files](#)
- [Opened](#)
- [Schedules](#)
- [Change the User Console Theme](#)
- [Use Pentaho Tools](#)

Login to the User Console

Follow these steps to login to the **User Console**:

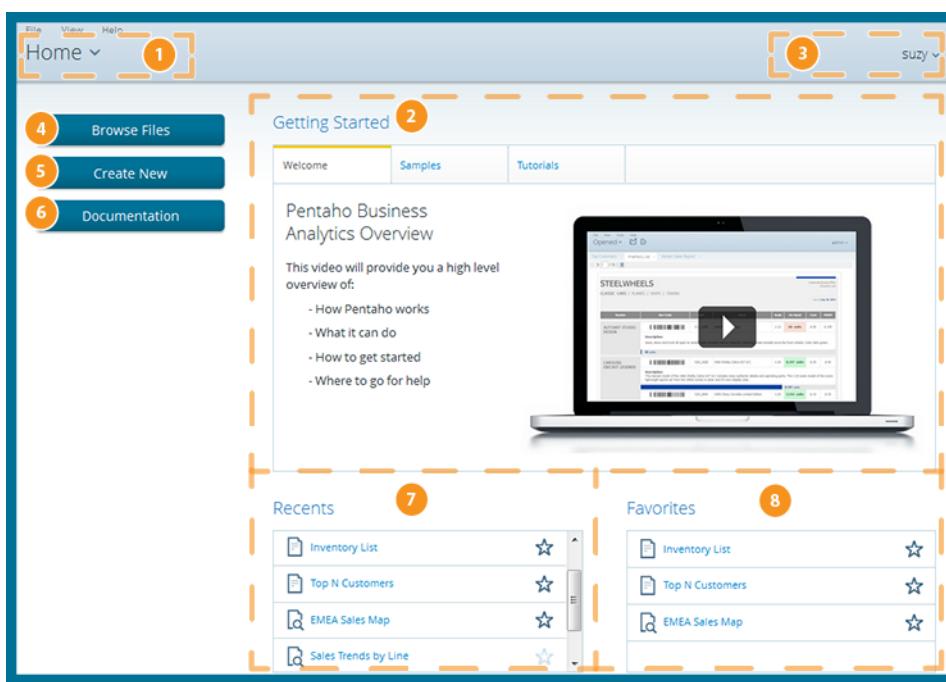

1. Launch a Web browser and enter the URL of the Pentaho server.
The page loads an introductory screen with a **Login** section.
2. Enter your user name and password and click **Login**.

You are now logged into the **User Console** and ready to start creating and running reports and dashboards.

Home

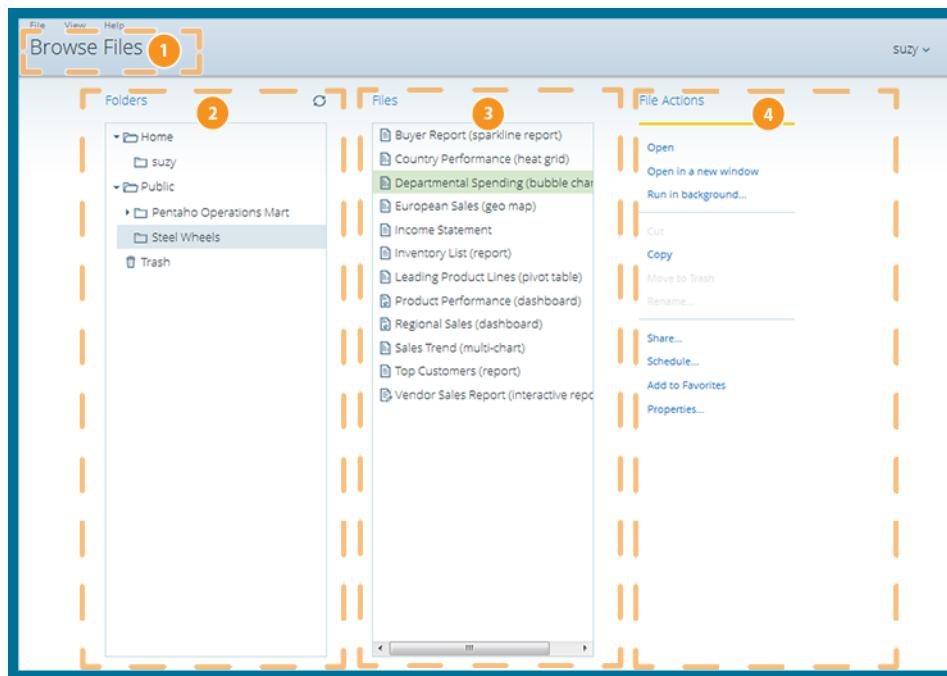

The first thing you see after you log into the **User Console** is the **Home** page, which serves as the portal for you to access Pentaho tools and features. **Home** contains easy access buttons so that you can **Browse Files**, **Create New** reports and dashboards, view Pentaho **Documentation**, and quickly open recently viewed or favorite files.

Item	Name	Function
1	Home indicator	Indicates the current User Console perspective that you are using. The Home menu lets you flip easily from page to page, or return to your Home page.
2	Getting Started	Displays some resources to help you get familiar with the User Console. The Welcome tab shows an introductory video about Pentaho products. The Samples tab holds a variety of small sample reports and dashboards that you can use to get familiar with the software. The Tutorials tab contains a number of tutorial videos that give you a visual guide to the software.
3	Current User	Shows the name of the person currently logged in to the User Console. Clicking the arrow next to the name lets you log out of the User Console.
4	Browse Files	Brings you to the Browse Files window, where you can locate your files using the Browsing and Files panes, and manage them using the Actions pane.
5	Create New	Gives you the option to create a new <i>Interactive Report</i> , <i>Analyzer Report</i> , or <i>Dashboard</i> .
6	Documentation	Leads you to the Pentaho Infocenter, which stores the documentation for Pentaho products.
7	Recents	Shows a list of your most recently opened files. Clicking on the star next to a recently opened file adds it to your Favorites list.
8	Favorites	Shows a list of your favorite files for quick access.

Browse Files

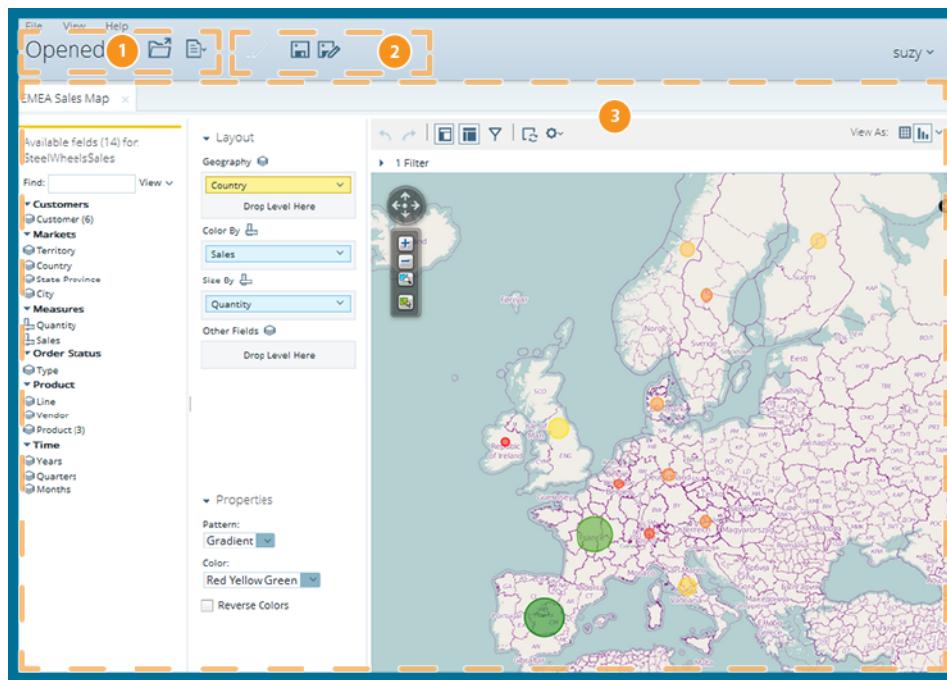

The **Browse Files** page helps you keep your files and folders organized and makes them easier for you to find and work with.

Item	Name	Function
1	Browse Files indicator	Indicates the current User Console perspective that you are using. Browse Files shows you how to locate your files and folders and the different actions you can do with them. Displays a series of three panes: the Browsing , Files , and Actions panes.
2	Folders	Shows a list of folders that you can browse through to locate your files. You can also use the Browsing pane to create new folders or delete old ones. After you select something in the Browsing pane, the Actions pane populates with a list of things you can do with the folders.
3	Files	Generates and shows a list of all files contained in the folder that is selected in the Browsing pane. After you select a file, the Actions pane populates with a list of things you can do with the file.
4	File Actions	Shows a list of different things that you can do with the selected folder or file. The Actions pane gives you the ability to: <ul style="list-style-type: none"> • Quickly open files in the current window or in a new one • Run files in the background • Edit, delete, cut, copy, or paste files or folders • Share files with others • Schedule reports to run automatically • Add files to your Favorites widget • View the Properties of a file or folder

Opened

The **Opened** page activates after you open a file from the **Browse Files** page and provides a simple space to work with your files.

Item	Name	Function
1	Opened indicator Open... New Interactive, Analyzer, or Dashboard	Indicates the current User Console perspective that you are using. Opened displays the files that you access from the Browse Files pane. <ul style="list-style-type: none"> • Open... serves as a quick way to browse for more files to open without leaving the Opened page. These additional files open in new tabs across the Report Window. • Quick start buttons to create a new Interactive or Analyzer, or Dashboards.
2	Edit, Save, and Save As	Gives you the ability to perform these functions on the active file in the Report Window : edit, save the file with a default name in the same location, or save the file with a different name and in any location on the repository or your desktop
3	Report Window	Displays the file or report that is currently opened, and lets you edit or work with the file.

Schedules

All of your active scheduled reports appear in the list of schedules, which you can get to by clicking the **Home** drop-down menu, then the **Schedules** link, in the upper-left corner of the **User Console** page. You can also access your list of schedules from the **Browse Files** page, if you have a file selected.

The list of schedules shows which files are scheduled to run, the recurrence pattern for the schedule, when it was last run, when it is set to run again, and the current state of the schedule.

The screenshot shows the 'Schedules' perspective in the Pentaho User Console. At the top, there's a toolbar with icons for Refresh, Run Now, Stop Scheduled Task, Start Scheduled Task, and Help. Below the toolbar is a header 'My Schedules'. A table lists two scheduled reports:

Schedule Name	Repeats	Source File	Output Location	Last Run	Next Run	Status
EMEA Sales Map	The first Sunday of every month at 01:00:00	/public/pentaho-solutions/analysis/EMEA Sales Map	/home/suzi	-	2013 Sep 1 01:00:00	NORMAL
Top 5 Product Lines by Territory	Every Monday at 01:00:00	/public/pentaho-solutions/analysis/Top 5 Product Lines by Territory	/home/suzi	-	2013 Aug 19 01:00:00	NORMAL

Below the table is a section titled 'Blockout Times' with a note: 'All schedules will be blocked out during the following times:'. It shows a table with columns 'Starts', 'Ends', 'Repeats', and 'Repeats End By'. The data is as follows:

Starts	Ends	Repeats	Repeats End By
Mon, Aug 12 1:00 AM	Sat, Aug 17 3:00 AM	Every Saturday at 01:00:00	Never

Item	Name	Function
1	Schedules indicator	Indicates the current User Console perspective that you are using. Schedules displays a list of <i>schedules that you create</i> , a toolbar to work with your schedules, and a list of times that your schedules are blocked from running.
2	Schedule Name	Lists your schedules by the name you assign to them. Click the arrow next to Schedule Name to sort schedules alphabetically in ascending or descending order.
3	Repeats	Describes how often the schedule is set to run.
4	Source File	Displays the name of the file associated with the schedule.
5	Output Location	Shows the location that the scheduled report is saved.
6	Last Run	Shows the last time and date when the schedule was run.
7	Next Run	Shows the next time and date when the schedule will run again.
8	Status	Indicates the current Status of the schedule. The state can be either Normal or Paused.
9	Blockout Times	Lists the times that all schedules are blocked from running.

You can *edit and maintain each of your schedules* by using the controls above the schedules list, on the right end of the toolbar.

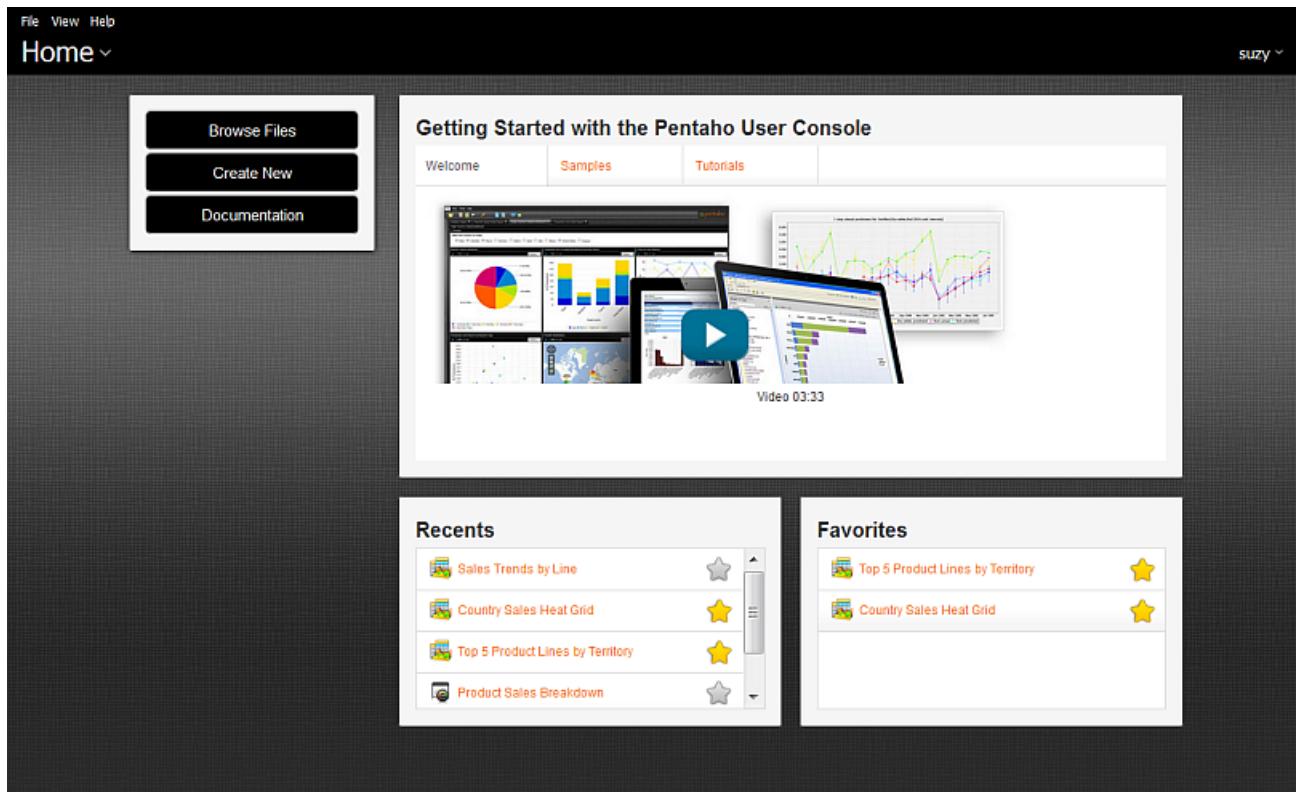

Icon	Name	Function
	Refresh	Refreshes the list of schedules.
	Run Now	Runs a selected schedule(s) at will.
	Stop Scheduled Task	Pauses a specified schedule. Use Start Schedule to start paused jobs.
	Start Scheduled Task	Resumes a previously stopped schedule.

Icon	Name	Function
	Edit Scheduled Task	Edits the details of an existing schedule.
	Remove Scheduled Task	Deletes a specified schedule. If the schedule is currently running, it continues to run, but it will not run again.

Change the User Console Theme

The **User Console** has two themes built in, called **Crystal** and **Onyx**. The default display shows the **Crystal** theme, but if you prefer, you can change the theme so the console displays the **Onyx** theme.

1. From any page of the User Console, click **View** in the upper-left menu bar.
2. Select **Themes**, then **Onyx**, from the drop-down menu.

The Home page refreshes and appears with the **Onyx** theme.

Use Pentaho Tools

The Pentaho User Console is a web-based user interface that is used to view, create, schedule, and apply permissions to reports and dashboards. These tools all run within the User Console in a browser (such as Firefox, Chrome, or Internet Explorer).

This table helps you decide what tools to use for your needs and provides links to the corresponding articles.

Table 1: Pentaho Tools Decision Table

Explore Considerations	Choose Options		
	<i>Interactive Reports</i>	<i>Analyzer Reports</i>	<i>Dashboard Designer</i>
Summary	Interactive Reports is a web-based design interface which is used to create both simple and on-demand operational reports without depending on IT or report developers.	Analyzer Reports is an analytical visualization tool that filters and drills down into business information contained in Pentaho Analysis data sources.	Dashboard Designer allows users to create dashboards with little or no training. The dashboard is several different reports brought together inside one screen.
Expertise	Basic computer skills and knowledge of web browsers.	Basic computer skills, knowledge of web browsers, familiarity with data structures.	Basic computer skills and knowledge of web browsers.
Time	Approximately 30 minutes.	Approximately 30 to 60 minutes.	Approximately 30 minutes.
Recommendation	Use Interactive Reports to create operational or financial reports, create reports that provide you with significant control over formatting elements such as fonts, background color, and column widths and sorting.	Use Analyzer Reports to perform advanced sorting and filtering of your data, create drill through reports to access underlying data, view chart visualizations, or to analyze business data quickly in a dynamic environment.	Use Dashboard Designer if you want to create an interface to view multiple reports at once, view charts and graphs within one space while you create reports in another, and have quick access to web pages that you visit often.

Use Pentaho Interactive Reporting

Interactive Reporting provides you with a web-based, drag-and-drop interface that allows you to add elements to your report layout quickly and easily.

Available features include:

- Font selection
- Column resizing
- Column sorting
- Ability to rename column headers
- Copy and paste functionality
- Unlimited undo and redo functionality
- Ability to output reports as HTML, PDF, CSV, or Excel files
- Ability to display reports in a dashboard

Before you can create an Interactive Report, you must have access to a data source provided by an administrator. The data source for an Interactive Report is based on a metadata model. A metadata model presents the data you use in reports in business terms. For example, users see Customers and Orders instead of CUST_TBLE or ORDR_TBLE.

 **Note:** All graphics displayed in this section show the *Onyx* theme.

Create an Interactive Report

Creating Interactive reports is easy to do from the **Home** page of the **User Console**. Interactive reports are built by clicking and dragging fields from your data source and on to a report canvas. You can see the report take shape as you drag fields to the canvas, and you can change the layout and format of the report as you go along.

These steps guide you through making an Interactive report.

1. From User Console **Home**, click **Create New**, then **Interactive Report**.
2. Choose a data source for the report from the **Select Data Source** dialog box. Click **Ok**.
If no data source is listed in the dialog box, contact your administrator for help.
3. To add your first column, click and drag a field from the **Data** tab in the left pane. Drag the field over the report canvas on the right until a vertical green line appears, then drop the field in place.
The field becomes a column in your report.
4. Continue to drag and drop fields on to the report canvas until you have all the columns of your report in place.
You can rearrange the order of the columns by clicking on the headers and dragging the columns to the right or left of their current location. When a green line appears, you can drop the column there. You can also resize your columns by selecting the bar to the right or left of the column header and dragging it until your columns are the correct size.
5. Click **Save As**. Type a file name for your report and choose a location to save it in.

The new Interactive report is created and saved in a location of your choice. Please keep your new report open and go to the next section if you want to learn to group data in your Interactive report.

Group Data in Your New Interactive Report

You can organize the data in your Interactive reports by grouping it in different fields, such as geographic region, product line, or both. After you get your data organized into groups, you can sort the data by clicking on the arrows that appear next to the group names.

1. If the field you want to group by is already a column in your report, click the column header and drag it up above the other headers in your report.
Release the mouse button once the horizontal green line appears.
2. If the field is not already a column in your report, drag it from the **Data** tab in the left pane. Drop the field in the space above the report headers.

3. If you want to group data by more than one field, you can nest it into a group by dragging the field or column header beneath the original group.
4. Click **Save**.

The data is grouped and organized in your Interactive report.

Filter Reports

Filters restrict or limit the data that is presented in a report. For instance, you can filter data to limit sales figures to the first quarter of the year. Interactive Reporting allows you to use several different methods to filter data.

Add Filters to an Interactive Report

Filters are used to restrict or limit data in a report, building the report to show only the information that you want to view.

For example, a typical report shows sales by product line. A time filter on Quarter restricts the data so that only sales for the one quarter are shown.

If you add a regional filter for Europe, the report would display data pertaining to European sales for that quarter. If you add a filter on another field to exclude a product, the report would display data pertaining to European sales in that quarter, which are also not a part of the excluded product line.

These steps describe how to add filters to an Interactive report.

1. Login to the User Console, and click **Browse Files** to browse to the location of your Interactive report.
 2. Open the report. Click the blue plus sign next to **No Filters** on the toolbar near the top of the report.
- A workspace for filters appears at the top of the report.
3. From the **Available Fields** panel, drag fields into the **Filter Panel**.

The **Filter** dialog box appears. Notice that the values associated with the field are listed in the dialog box. You can choose one of these values, or you can enable **Match a specific string** to filter the report on a specific string of data.

4. Select the value or values that you want from the **Add Selected** list and click the arrow to move it into the right pane. The value appears with a green check mark next to it in the right pane.
5. After you have selected all of the values that you need from the list, click **OK** to exit the dialog box.
6. Repeat this process for each field that you want to filter on.

The Interactive report displays data for the chosen values only.

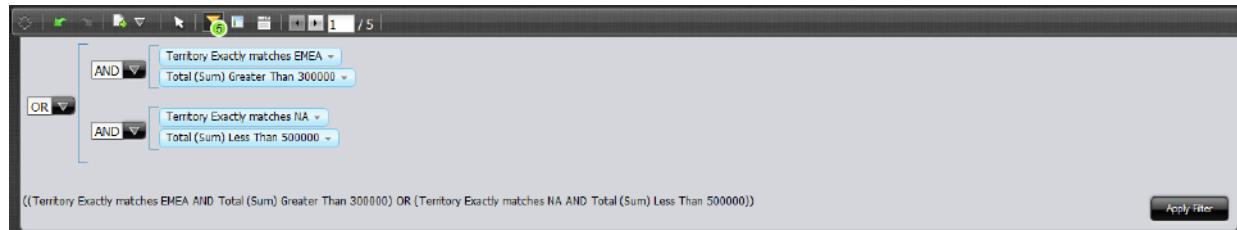

7. Save your report.

The Interactive report is filtered and saved. You can click Undo or Reset to return to the previous version of the report.

Create Advanced Filters

You can create filters on multiple groups of fields, rather than a single group of fields. Filters with multiple groups are called advanced filters. To create an advanced filter, drag the fields into the **Filter Panel** and move items into multiple groups by moving them up, down, and indenting them to create a hierarchy.

This example shows how to uses a sample database for the purpose of providing a guide to follow. It uses the **Order** database, which is part of the **Steel-Wheels** sample data, to build a filter that shows all orders that are less than \$500,000 in North American and are greater than \$300,000 in EMEA.

Follow these steps to create an advanced filter using the filter created in [Add Filters to an Interactive Report](#) on page 14.

1. Click the down-arrow on **Total (Sum) Less Than 500000** and choose **Indent**.

2. Click the down-arrow on **Territory Exactly matches NA** and choose **Move Down**.
3. Click the down-arrow on **Total (Sum) Greater Than 300000** and choose **Indent**.
4. Click the down-arrow on **Territory Exactly matches EMEA** and choose **Move Down**.
5. Click the down-arrow on the left **AND/OR** drop-down and choose **OR**.
6. Click **Apply Now** to apply the filter to your data.

The workspace shows data that either has a **Total sum that is less than 500,000 in North America** or a **Total sum greater than 300,000 in EMEA**.

Apply a Summary Function

You can assign a summary function to columns that contain numeric values in your report. A summary function is a summarization technique that performs calculations on values in columns, groups, or in the entire report.

1. Click the down arrow next to a report column that contains numeric values.
2. Select **Summary** from the menu, then choose the summary type.

Function Name	Description
None	No summary function assigned
Average	Calculates the average value in a given column
Count	Counts the items in a group or report, but does not require a numeric value.
Count Distinct	Counts the distinct occurrences of a certain value in a column; does not require a numeric value
Max	Identifies the highest or largest value in a column
Min	Identifies the lowest or smallest value in a column
Sum	Calculates a total sum of the group or report (group level, and running total in the report footer)

The numeric values in the column update.

3. Save the report.

Apply an Aggregate Function

You can assign an aggregate function to columns that contain numeric and non-numeric values in your report. Aggregate functions return a single value (for example, Average, Maximum, Minimum), calculated from the values in a column. For example, the sum of a column results from adding all the values in the column.

1. Click the down arrow next to a report column that contains numeric values.
2. Select **Aggregation** from the menu, then choose the aggregation type.

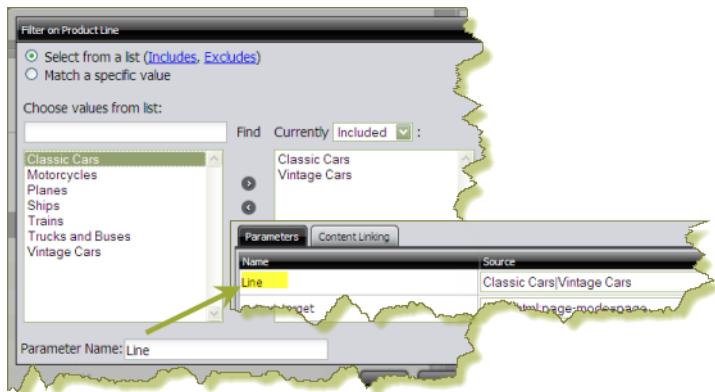

Function Name	Description
None	No aggregate function assigned
Average	Calculates the average value in a given column
Count	Counts the items in a column; does not require a numeric value
Count Distinct	Counts the distinct occurrences of a certain value in a column; does not require a numeric value
Max	Identifies the highest or largest value in a column
Min	Identifies the lowest or smallest value in a column
Sum	Calculates a running total sum of the specified column

The values in the column update.

- Save the report.

Flag a Filter Constraint for Use as a Dashboard Parameter

You can flag a filter constraint for use as a parameter. The parameter name will appear on the Parameters tab in Dashboard Designer when you place the report into a dashboard panel. You can also edit parameters while working in Report Designer.

- After you create your filter, enter the parameter name in the **Parameter Name** text box.
- Click **OK**.
- Save your report.

The parameter is ready to be used in Dashboard Designer. To see if the parameter appears in Dashboard Designer, insert your report into a dashboard panel. The parameter name will appear on the **Parameters** tab.

Add a Filter on Date Fields

Use these steps to add a filter that matches a specific value.

- In the toolbar, click (Filters).
The **Filters Panel** appears above the report.
- Click and drag a **date field** from the right pane into the **Filters** area.
The **Filters** dialog box opens.
- Next to the field name, choose a date constraint from the list, then click the small arrow on the right to display the date picker.
To create a "date range" you must add two filters: one for the start date, and one for the end date.
- In the date picker choose your date.
- Click **OK** to save your filter.

The report display updates as soon as the filter is added. The filter appears in the Filter box and an icon displays next to the field name in the **Data** tab. Also, the number of filters added to the report appears next to the filter icon in the toolbar.

You can edit the filter by clicking (Edit). You can delete the filter by clicking .

Disable Auto Refresh Mode in Interactive Reports

When you disable the **Auto Refresh** mode in Interactive Report you can design your report layout first, including calculations and filtering, without querying the database until you are done. When the report layout is complete, you can re-enable Auto Refresh mode. Data retrieval occurs once, and your report displays the requested data. Disable auto refresh if you want to reduce the number of queries executed against the data source, or if you know that the data source returns data slowly.

To disable Auto Refresh, click the small icon in the upper-right corner of the **Data** tab to open the Query Setup dialog box, then disable the **Auto Refresh** option.

Enable Row Limits and Query Timeouts

You can limit the number of rows that are displayed in your report. You can also limit the number of seconds a query runs before a timeout occurs. Imposing row limits and timeouts on queries is important to avoid out-of-memory errors, or processes that consume too many resources on the database server.

Both options are available in the **Query Setup** dialog box. In the **Data** tab, click the small icon in the upper-right corner to open the Query Setup dialog box. Make changes as needed and close the dialog box when you are done.

Refine Your Interactive Report

Now that you have defined the data for your report, you are ready to begin refining some of the formatting elements in your report.

See the *Interactive Reporting Quick Reference* section for an overview of formatting actions.

Edit Report Headers and Footers

To create the page headers, double-click the upper-left or upper-right corner of the report.

A pop-up dialog box appears. You can:

- Delete any existing words, or enter a new header and press <ENTER>.
- Click **Date** and press <ENTER> to insert a date and time stamp in the page header. You can customize the date and page count by adding your own text, such as, **Today: \${report.date}**, instead of using the default, **\${report.date}**.
- Click **#/Pages** and press <ENTER> to insert the number of pages in the report, as in 1/1 (page one of one).

Repeat this process for the page footers, at bottom-left and bottom-right.

Edit the Report Title

To edit the report title, double-click **Untitled**; a pop-up dialog box appears. Enter a title for your report in the text box; then press <ENTER>.

Reorder and Adjust Columns

To change the order of columns in your report, choose the column you want to move, then drag it to the desired location. Alternatively, choose the column you want to move, click the down-arrow, and choose **Move (Left or Right)** from the menu.

To adjust a column's width, choose the column, then click the vertical line that divides the column headers. Move the line left or right to adjust the column width.

Format Interactive Reports

You can use the **Formatting** tab in the left pane to change the appearance of your report, including font color, size, text alignment, background color options, and more.

Change the Report Template

To change a report template, click the **General** tab, then use the left and right arrows to page through available templates. Click **Select** to see all templates.

If you decide to change the report template, answer **Yes** or **No** when you are prompted whether to keep that formatting change. The report display is updated to reflect the new template.

Change Page Format and Orientation

By default, Interactive Report creates a portrait mode page in Letter format (8.5" x 11"), a format used in the United States. You may need to change the page orientation or format.

To change page orientation, click the **General** tab, then click **Page Setup**. In the Page Setup dialog box, click the appropriate icon. Click **OK** to save your changes.

To change page format, click the **General** tab, then click **Page Setup**. In the Page Setup dialog box, choose the correct page format for your report. Page margin measurements are displayed in the lower part of the dialog box. You can adjust the measurements as needed. Click **OK** to save your changes.

Change a Column Header Name

To change a column header name, double-click the column header; a pop-up dialog box appears. Enter the new header name and press <**Enter**>.

Apply Copy/Paste Formatting

You can use the **Copy formatting/Paste formatting** options on the **Formatting** tab to copy column formatting to other columns in your report.

Select the column that contains the formatting you want to copy, then click **Copy Formatting**. Select the column to which you want to apply that format and click **Paste Formatting**.

Change the Format of Numeric Values

If your column contains numeric values, you may need to change the formatting associated with those values. Click inside the column you want to format, so it appears selected. Click the **Formatting** tab, then choose the appropriate format for the values in your column.

In some instances, you might notice that your numeric values have already been formatted. For example, money symbols are already included in sales figures. Such formatting is inherited from metadata associated with the data source. However, you can override inherited formats whenever you want.

Edit Interactive Reports

Use these steps to edit your interactive report.

1. Login to the User Console and click **Browse Files** to locate the folder containing your report.
2. Right-click the report name and choose **Edit**. Alternatively, double-click the report name to open it, then click  (Edit) in the User Console toolbar.
3. Edit your report as needed.
4. Save your report.

Interactive Reports and Report Designer

You can customize interactive reports even more by using Report Designer, the most comprehensive report design tool in the Business Analytics software market. In addition to providing advanced formatting capabilities, Report Designer lets you connect to disparate data sources. Charts and other report elements, including sub-reports, can be added to a basic report. Report Designer lets you:

- Connect to diverse data sources from Pentaho Data Integration transformations, including relational data, analysis, metadata, flat files, java objects, or stream data
- Create and view user prompts, including dynamic cascading prompts
- Add data visualizations such as charts, barcodes, sparklines, survey scales, and more
- Localize reports easily to support multi-lingual deployment with a single report file
- Embed HTML and JavaScript controls for dynamic and interactive online reports
- Fine-tune reports using the built-in interactive preview mode

Important: After you customize an Interactive Report using Report Designer, you can no longer edit the report using the Interactive Reporting module in the User Console.

Interactive Reports are saved as **.prpti** files. Report Designer report files have a **.prpt** extension. In the User Console, Interactive Reports are displayed with a special icon that differentiates them from reports that are created in Report Designer.

If you want to create a new Interactive Reporting template, you must create it in Report Designer and place the template in the Interactive Reporting templates directory.

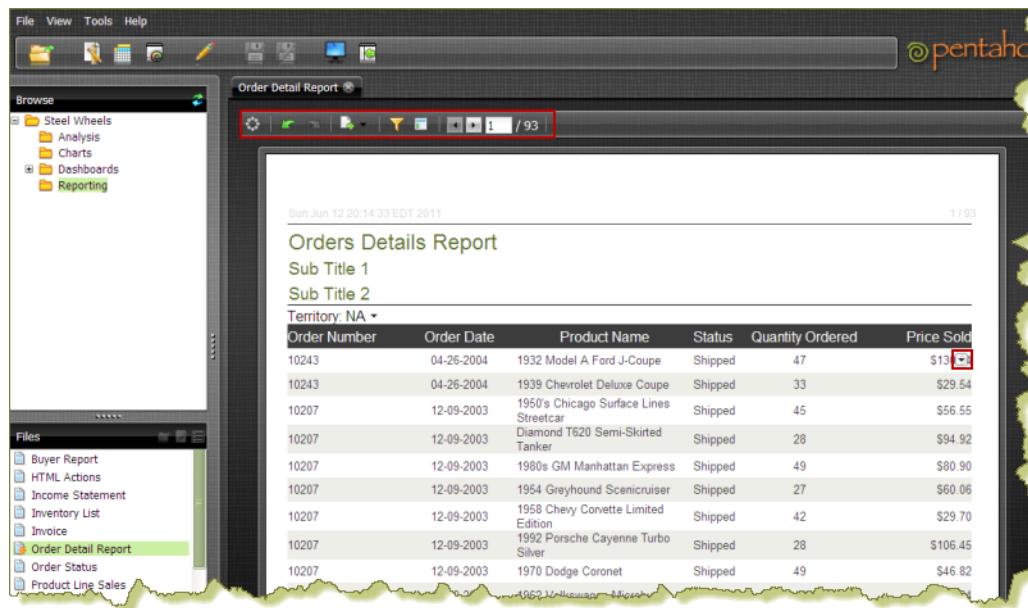

For more information about enhancing Interactive Reports and building Interactive Reporting templates in Report Designer, refer to the section [Design Print-Quality Reports](#).

Read an Interactive Report in View-Only Mode

After you save your interactive report, browse for it in your BA repository. You can quickly identify an Interactive Report by its icon. When the report appears, notice the toolbar that allows you to perform certain actions on the report. Hover your mouse over the icons in the toolbar to see which actions you can take. These actions include, but are not limited to...

- Exporting a report as a PDF, HTML, Excel, or CSV file to be saved locally
- Adding filters for viewing report data
- Rearranging the report layout, such as moving, sorting, and removing columns from the report
- Editing page headers and footers
- Editing the report title

You cannot save any changes to your report when you are in View-only mode. However, you can click  (Edit) in the User Console toolbar to return to edit mode and save your changes.

Interactive Reporting Quick Reference

General

Action	Description
To hide tips on startup...	Disable Show tips on startup in Preferences on the General tab.
To show tips on startup...	Enable Show tips on startup in Preferences on the General tab.
To hide tips altogether...	Click Hide Tips in Preferences on the General tab.
To disable menu buttons...	Disable Enable menu buttons in Preferences on the General tab.
To enable menu buttons (down arrow next to a report column)...	Click Enable menu buttons in Preferences on the General tab.

Action	Description
To enable Select Distinct...	Click the Query Setup icon in the Data tab to prevent the report from displaying duplicate values in columns. Enabling this option will list different (distinct) values in a table.
To export a report...	Click Export and choose your export file type: PDF, Excel, CSV or HTML. You can save exported files on your computer.

Fields and Columns

Action	Description
To place a field on the report canvas...	Click and drag a field from the right pane to the report canvas. Alternatively, double-click a field name to place it on the report canvas. For quick placement, click Layout in the toolbar and drag the fields into the Columns area. Alternatively, right-click a field name and choose Column .
To place multiple fields on the report canvas...	Press the < CTRL > key and choose multiple fields in the right pane, then drag the fields onto the report canvas. The fields will become columns in the report in the order in which they were selected.
To move columns left or right...	Click the report header and move the column to the desired location. Right-click the column header and choose Move > Right (or Left). You can also move columns as needed by clicking the Layout button in the toolbar and dragging the columns to the desired position.
To adjust column width...	Click the column header to choose it. Move your cursor to the right or left until a small horizontal line appears. Drag the line to the desired width.
To assign column width (percentage)	Enter a value in the Column Width text box on the Formatting tab.
To change the column name...	Double-click the column name and enter the new name in the available text box.
To remove a column...	Click and drag the column header to the right and place the column into the trash can.

Grouping

Action	Description
To add a group to a report...	Click and drag a group field from the right pane up above the column headers in the report. Release the mouse button when the green horizontal line appears. If the group field you want is a column in the report, drag the column name above the column headers in the report. Release the mouse button when the green horizontal line appears. For quick placement, click the Layout button and drag the fields into the Groups area. Alternatively, right-click the field name you want as your group and choose Group .
To add more than one group to a report...	Click another group field from the right pane and drag it above or below the previously placed group.
To change the sort order of a group...	Click the small arrow to the right of the group name to change the sort order. Assign the sort order under Group Sorting in the right pane

Filtering

Action	Description
To add a filter...	Click Filters in the toolbar, then drag a field into the Filter area. Right-click the field name you want to filter on (on the Data tab), and choose Filter . Select column name, click to open the context menu, and choose Filter .
To edit a filter...	Click the Edit icon next to the filter name to open the Filter dialog box. Make your changes and click OK . Or you can choose a column name, click to open the context menu, and choose Filter .
To delete a filter...	Click Filters in the toolbar, then click the Delete icon next to the filter name.
To choose a filter value from a list...	Click Select from list in the Filter dialog box.
To find a filter value in a list...	Enter the first few characters of the value and click Find . Entries are case-sensitive.
To include or exclude a filter value from a list...	Click either the Includes or Excludes link next to Select from list . Alternatively, make a selection next to Currently in the Filter dialog box.
To specify a specific filter value...	Click Match a specific value , then choose a constraint from the list.
To create an advanced query ...	Within the Filter Pane , click the Advanced Filter button in the bottom-right corner. Enter an MQL query.

Formatting

Action	Description
To undo or redo previous actions...	Within the toolbar, click the green left-pointing arrow to Undo , or the green right-pointing arrow to Redo .
To change the font type a column header...	Select the column header. Under the Formatting tab, choose font type from the available list.
To change font type the column details...	Select the column details. Under the Formatting tab, choose font type from the available list.
To change font color in a column header...	Select column header. Under the Formatting tab, click the text color icon to choose font color from the available list.
To change the font color in column details	Select column details. Under the Formatting tab, click (icon here) to choose font color from the available list.
To change the column header background color...	Select the column header. Under the Formatting tab, click the Background Color bucket icon. Select a color from the color picker, or create your own custom color.
To change the column details background color...	Select column details. Under the Formatting tab, click the Background Color bucket icon. Select a color from the color picker, or create your own custom color.
To apply text justification...	Select the report element column header or column details. Under the Formatting tab, click the appropriate text alignment option. Column headers can be formatted separately from column details.

Use Pentaho Analyzer

Pentaho Analyzer has an easy web-based, drag-and-drop interface so you can analyze your data without depending on administrators or developers. You can display Analyzer reports in a [dashboard](#) in the User Console.

Unlike standard reports, which tend to be static or minimally interactive after they are created, Pentaho Analyzer reports let you explore your data dynamically, and drill down to discover previously hidden details. Pentaho Analyzer presents data multi-dimensionally, and lets you choose which dimensions and measures you want to explore.

 **Note:** All graphics displayed in this section show the [Onyx](#) theme.

Create a New Analyzer Report

You can create a report that allows you to easily compare data. For example, you could display the actual versus budgeted expenses by region for each of your departments.

1. From User Console **Home**, click **Create New**, then **Analysis Report**.
2. Choose a data source for the report from the **Select Data Source** dialog box. Click **Ok**.
3. From the **Available Fields** pane on the left, click and drag an object to the **Rows** or **Columns** area in the **Layout** panel.
The data row or column appears in the table workspace.
4. In the list of fields, click and drag a measure to the **Measures** area in the Layout pane.
The measure appears as a column in the table workspace.
5. Right-click a column and choose **Column Name and Format** from the menu.
The **Edit Column** window appears.
6. Choose a format from the **Format** drop-down box. Click **OK**.
The data updates automatically and is displayed selected.
7. Click **Save As**. Type a file name for your report and choose a location to save it in.

The new **Analyzer** report is created and saved in a location of your choice.

Add Filters to an Analyzer Report

Filters are used to restrict or limit data in a report, building the report to show only the information that you want to view.

For example, a typical report shows sales by product line. A time filter on Quarter restricts the data so that only sales for the one quarter are shown.

If you add a regional filter for Europe, the report would display data pertaining to European sales for that quarter. If you add a filter on another field to exclude a product, the report would display data pertaining to European sales in that quarter, which are also not a part of the excluded product line.

Use these steps to add a filter to your Analyzer report.

1. Login to the User Console, and click **Browse Files** to browse to the location of your Analyzer report.
2. Open the report. Click blue plus sign next to **No Filters** on the toolbar near the top of the report.
A workspace for filters appears at the top of the report.
3. From the **Data Source** pane, click and drag a field or column into the filter workspace.
The **Filter** dialog box appears. Notice that the values associated with the field are listed in the dialog box. You can choose one of these values, or you can enable **Match a specific string** to filter the report on a specific string of data.
4. Select the value or values that you want from the **Add Selected** list and click the arrow to move it into the right pane.
The value appears with a green check mark next to it in the right pane.
5. After you have selected all of the values that you need from the list, click **OK** to exit the dialog box.
Your Analyzer report displays data for the chosen values only.
6. Save your report.

The Analyzer report is filtered and saved. You can click Undo or Reset to return to the previous version of the report.

Create Date Range Filters

Date range filters enable you to show only data that meets the conditions of the filter in a report. For example, you can create filters to display data between 2010 and 2013, or data after 2010.

1. Log in to the User Console, choose **New Analysis**.
The **Select Data Source** dialog appears.
2. Select the data source that you want to use and click **OK**.
3. Create an Analyzer report with a time dimension, such as year or quarter.
4. Right-click the column or row header for the time dimension and choose **Filter**.
The **Filter** dialog appears.
5. Choose **Select a range**.
6. From the drop-down menus, choose **Between (and incl.)**, **After (and incl.)**, or **Before (and incl.)** and the dates that you want to appear as a result of filter.
7. Click **OK**.

The Analyzer report filters data according to data ranges you specified.

When you create a date range filter using the **Between (and incl.)** operator and parameterize it, as described in [Adding Query Parameters in Analyzer Reports](#), you specify one parameter name, but two parameters are created. One parameter controls the start of the range, and another controls the end of the range. The start date parameter is **<YourParameterName>_START**, and the end date parameter is **<YourParameterName>_END**.

Add Query Parameters to Analyzer Reports

You must be logged in to the User Console. Open the Analyzer report you created in [Adding Filters to an Analyzer Report](#).

You can parameterize a query in Analyzer.

1. Right-click the dimension member you want to create a parameter for, and select **Filter** from the context menu.
2. Select the level you want to set as the default parameter value, then click the right arrow to move it to the list on the right.
3. Click the check box at the bottom of the window, then enter a name for the parameter in the **Parameter Name** field.
4. Click **OK**.

Your parameter is a filter in Analyzer. Whenever this Analyzer report is run, users will have a selection of columns to filter by.

Export an Analyzer Report

You can export a report as a PDF, XLSX, or CSV file.

1. In the Analyzer toolbar, click **More actions and options > Export Report**, and choose the desired output format.
The **Export** dialogue box appears.
2. If you export to a PDF, specify how you want the page formatted, then choose one of the following options.

Option	Description
Done	Saves export settings, but does not export.
Export	Applies options and generates output. If your report includes a chart, it is included in the report, along with the table view.
Cancel	Discards all changes.

You must save the report if you want it to keep the export settings. Metadata for report author, source file location, fields used and filter summary are included in the report.

Display Member Properties

When a number in parenthesis appears next to a dimension in a list of **Available fields**, that dimension is associated with specific member properties. You can use those properties to constrain dimensions.

1. If you want to review available fields, click **Add more fields onto the report** on the report toolbar.
2. Locate a dimension in the **Available fields** list that includes a number in parenthesis. Examples: Customer (6), Product (3)
3. Locate the corresponding dimension on your report. Right-click the row or column header for that dimension, then click **Show Properties**.
A menu displays member properties you can choose.
4. Select or clear the member property you want in the report, then click **OK**.

Your analyzer report is filtered by the choices you made.

Configure Drill-Down Links

To create reports based on specific number value data, you can implement drill-down links in Analyzer. This will turn all non-calculated number fields into links which, when clicked, bring up a configurable data grid that enables you to quickly view more details for that data point without having to reconfigure your report. Follow the directions below to turn on drill-linking.

Drill-down links will not work in reports that have filters that are not being used. If you have any filters in an Analyzer report, they must be used in the report in order to view drill-down links.

Calculated members are unavailable for drill-down at this time.

1. Open the Analyzer report that you want to add drill links to.
2. Go to the **More** menu in the upper right corner of the report, and select **Report Options** from it.
3. Select the **Show drillthrough links on Measure cells** checkbox, then click **OK**.
The measure fields in your report will turn into links.
4. Click a drill-down link to see a data grid that shows all of the available details for that value.
5. To add or remove columns from the grid, click the down arrow on the right side of any column and select the **Columns** sub-menu. From there you can select which columns you want to appear. You can also sort by ascending or descending values for any column through this menu.

You now have drill-down links for numeric, non-calculated members.

Disable Auto Refresh Mode

When you disable the **Auto Refresh Report** feature in Analyzer you can design your report layout first, including calculations and filtering, without querying the database automatically after each change. You can enable the Auto Refresh Report option at any time. When you enable data retrieval, your report will display the requested data.

Use these steps to disable auto refresh and build a report.

1. Login to the User Console, then from the **Home** page, click **Create New**, then **Analysis Report**.
2. When the **Select Data Source** dialog box appears, clear the **Auto Refresh Report** check box.
3. Click **OK**.
The Analyzer workspace appears.
4. To begin creating your report layout, select a field and drag it to the **Layout** panel at the left of the workspace.
A message appears when you place the first field allowing you to refresh the report. Right-click menus are available for each of the fields you have dragged to the field layout area. They also indicate the position of the fields once they are placed in the report. Notice that the Analyzer workspace is disabled (greyed out) if you are not in live query mode. You can click the enable/disable **Auto Refresh** button in the toolbar to toggle between the two modes.
5. Continue to build your report and query the database when the layout is complete. You may only build your report in the field layout area when Auto Refresh is disabled.
6. When your report is complete, click **Refresh** in the pink band of the field layout area. Alternatively, use the toggle button.

The Analyzer report updates based on the report definition and displays the results. You can continue to edit the report as needed and click **Refresh**, or enable the **Auto Refresh** ability to run the query again.

Define Hyperlinks

Presenting too much information in one report can overwhelm readers with distracting details, causing them to miss information that is important to them. You can manage the amount of information displayed in a report by hyperlinking

from one report to other related reports, charts, dashboards, and URLs. For example, you can present basic information in an easy-to-comprehend report with hyperlinks to reports that contain details.

For charts, hyperlinks take precedence over the *drill-down chart* feature. For example, when readers click a bar in a chart, it displays data related to the hyperlink you define, not the drill-down chart.

For reports, you can define a hyperlink on any row label or column header. When you define a hyperlink, the link is applied to all members within the row or column. In this source report, hyperlinks have been defined for the Positions row label and the Region column header. Notice how each of the row and column members have a blue underlined hyperlink.

When defining hyperlinks to a destination report that has *parameters*, you can map row labels and column headers in the source report to parameters in the destination report. This enables you to constrain the hyperlink result to display *only* data for the mapped parameters. If you do not restrain the results, all of the data appears and no filter applies.

For example, you can create a hyperlink in the source report for all the members in the **Position** row, and constrain the displayed data to only that related to each position and its department. To do this, you map the **Department** and **Position** row labels in the source report to the **Business Unit** and **Job Title** parameters in this destination report.

This is the result when the reader clicks on the Administrative Assistant position within the Finance Department in the source report.

Each parameter added to the mapping constrains the data further. You can map any row labels that appear to the left, and column headers that appear above the member data.

 **Note:** If you did not constrain the data with parameters, readers would see data for all Administrative Assistant Positions in all Departments.

Create Hyperlinks to a Report in the BA Repository

1. Create an Analyzer report or open an existing one.
2. Right-click a row label or column header and select **Hyperlink**. The **Link on** dialog box appears.
3. Click **Enable Link** to activate the hyperlink feature.
You can disable linking by clearing the **Enable Link** check box.
4. In the **Link To** drop-down menu, select **Pentaho Repository File**.
5. Click **Browse** to locate a report, chart, or dashboard in the BA repository and click **Open**.
 - a) If the destination report has parameters, they automatically appear in the **Destination Parameter** list on the left. Map parameters to related row labels or column headers by selecting the check box for each parameter you want to use to constrain the resulting data. Enter the related names of the row labels or column headers within curly brackets.
 - b) If the destination report does not have parameters, the Destination Parameter list does not appear. Go to the next step.
6. Specify how hyperlink content displays by clicking the **Open in:** drop-down menu and selecting **New Tab**, **New Window**, or **Current Window**.
7. Enter a **Tool Tip** to be displayed when you hover over hyperlinks and click **OK**.
Hyperlinks appear in the Analyzer report.
8. Click the links to ensure the content associated with them appears correctly and save the report.

Hyperlinking to a URL

1. Create an Analyzer report or open an existing one.
2. Right-click a row label or column header and select **Hyperlink**. The **Link on** dialog box appears.

3. Click **Enable Link** to activate the hyperlink feature.
You can disable linking by clearing the **Enable Link** check box.
4. In the **Link To** drop-down menu, choose **URL** from the dropdown menu.
5. In the **URL** field, enter the full web address you want the hyperlink to launch.
For example, <http://www.yahoo.com>.
6. Choose how the URL displays by clicking on the **Open in:**drop-down menu and selecting **New Tab**, **New Window**, or **Current Window**.
7. Enter a **Tool Tip** to be displayed when you hover over hyperlinks and click **OK**.
The new hyperlinks appear in the Analyzer report.
8. Click the links to ensure the website associated with them appears correctly and save the report.

Simple Conditional Formatting of Measures

Conditional formatting in the Analyzer data grid means that cells will be physically affected by the data they contain. The most common form of conditional formatting is stoplight reporting, where cell backgrounds are colored red, green, or yellow depending on user-defined thresholds. Analyzer offers some simple pre-defined methods of conditionally formatting numeric data. Follow the directions below to implement conditional cell formatting.

1. Right-click a measure in the grid, then select **Conditional Formatting** from the context menu.
A sub-menu with conditional formatting types will appear.
2. Select your preferred number format from the list.

The analyzer report will refresh and apply the formatting choice you specified.

Conditional Formatting Types

Indicator Type	Description
Color scale	The background cell color will be shaded according to the value of the cell relative to the highest and lowest recorded values in that measure. There are several color progressions to choose from.
Data bar	The cell background is partially filled with a solid color proportional to the scale of the cell's value relative to the highest and lowest recorded values in that measure.
Trend arrow	An upward or downward arrow is displayed to the right of the cell value depending on whether it contains a positive or negative value.

Analyzer Visualizations

Pentaho Analyzer offers many ways to visually display data. These graphics are called **visualizations**, and include maps, charts, and grids.

Set Chart Options

You can modify the aesthetics of a chart in Instaview by clicking Chart Options in the Properties panel in View mode. These options enable you to define how to display a chart; change a chart's colors, add a legend, and more. You can also access the Chart Options dialog box by clicking More actions and options  on the Analyzer toolbar and choose Chart Options.

General

Option	Description
Background	Fill type defines the background color of the chart and the specific fill colors used. A Gradient will result in a gradual color transition in the fill color. Choose the color you want

Option	Description
	from the available color pickers (Fill Color, End Color) You can choose not to have a fill color (None), or choose a single background color (Solid).
Labels	Allows you to choose a font type, size, formatting, and color of the labels in your chart.
Axis	Allows you to adjust the axis range. When set to Auto Range, the chart will scale based on the data. If you have a time series chart, you may want to set the range manually so that figures, (not close to the 0 axis), display correctly; (see image below). Select a Scale option to manage instances where numeric values in a chart are so long that they affect the display.

Legend

Option	Description
Show Legend	Allows you to enable to disable the legend display.
Position	Allows you to choose the placement (Top, Right, Bottom, Left) of the legend on the chart.
Background Color	Allows you to choose a background color for the legend.
Font	Allows you to set the font type, size, format, and color associated with your legend.

Other

Option	Description
Line Charts	Allows you to set the Bullet Style for points on a line chart and assign Line Width.
Multi-Charts	Allows you to define the number of charts that display when using the Multi-Charts feature.
Domain Limit	Allows you to limit the number of plot values that display in a chart.

Display Multi-Charts in Analyzer

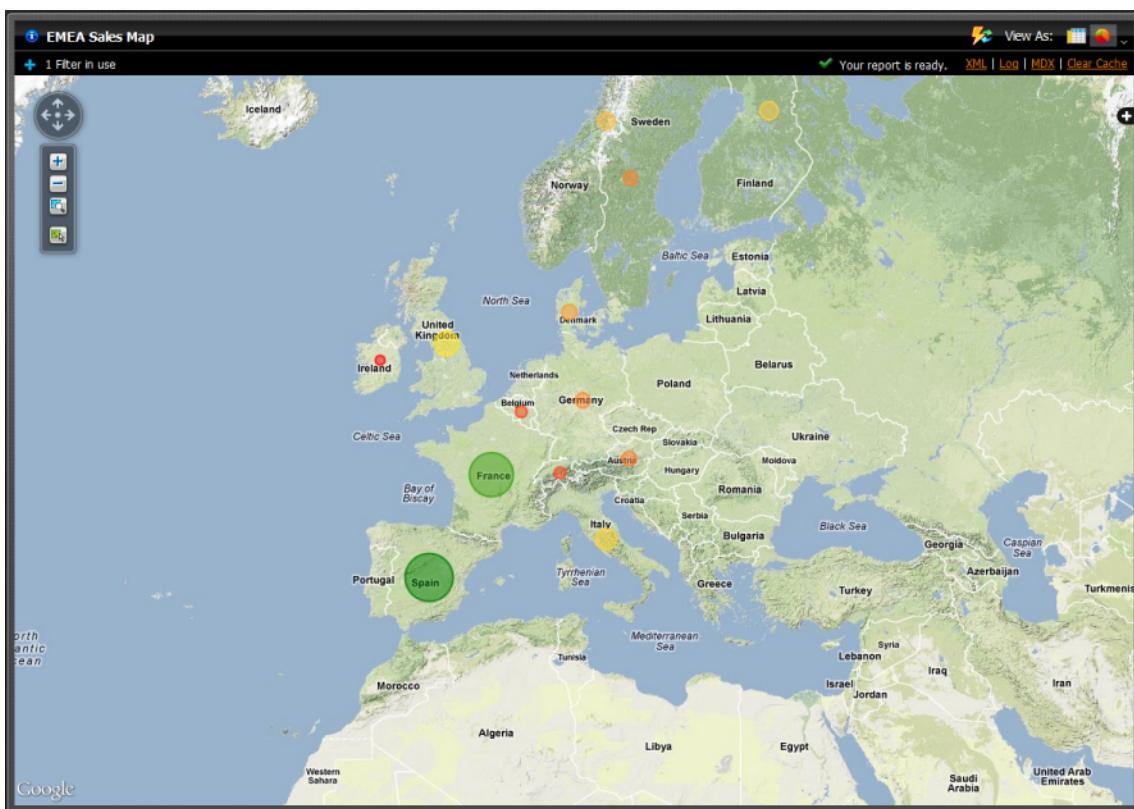

The Analyzer multi-chart feature allows you to display multiple charts in a single Analyzer report. For example, use this feature when you want to display the same data over different years. The multi-chart feature prevents you from having to create separate filters and reports.

You must have Auto-Refresh Mode disabled to use the Mutli-Chart feature.

1. Create or open an Analyzer report.
2. Click the **Switch to Chart Format** button to change to chart format.
3. Move the appropriate fields into the **Multi-Chart** section.
The field auto populates with the different charts dependent upon the level placed in the **Multi-Chart** field.
4. Save the report.

Geography Map Visualizations In Analyzer

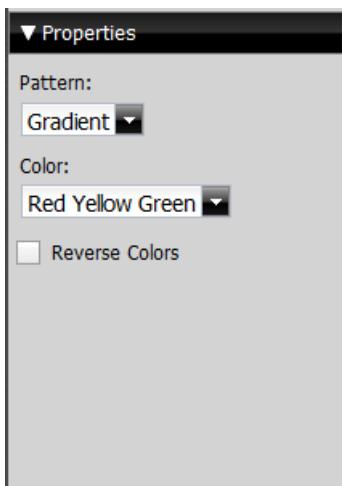

Geo maps enable you to visualize data on a geographic map. This visualization type will plot a pin on a map based on the location attribute used. You can then use a measure to color-code the pen and/or use a measure to specify the size of the pin. If your model has geographic annotations then the location information will be retrieved by the geoservice automatically.

You must have a [license](#) from Google if you choose to use Google Maps with Pentaho software for an internal BI deployment.

Change Geography Map Visualizations In Analyzer

The **Properties** panel enables you to customize the appearance of map visualizations.

The **Pattern** drop-down box allows you to decide the way the color of the pins populate. The appearance does not denote any of the data, it is solely for aesthetics. You have the option of choosing:

- Gradient
- 3 Step
- 5 Step

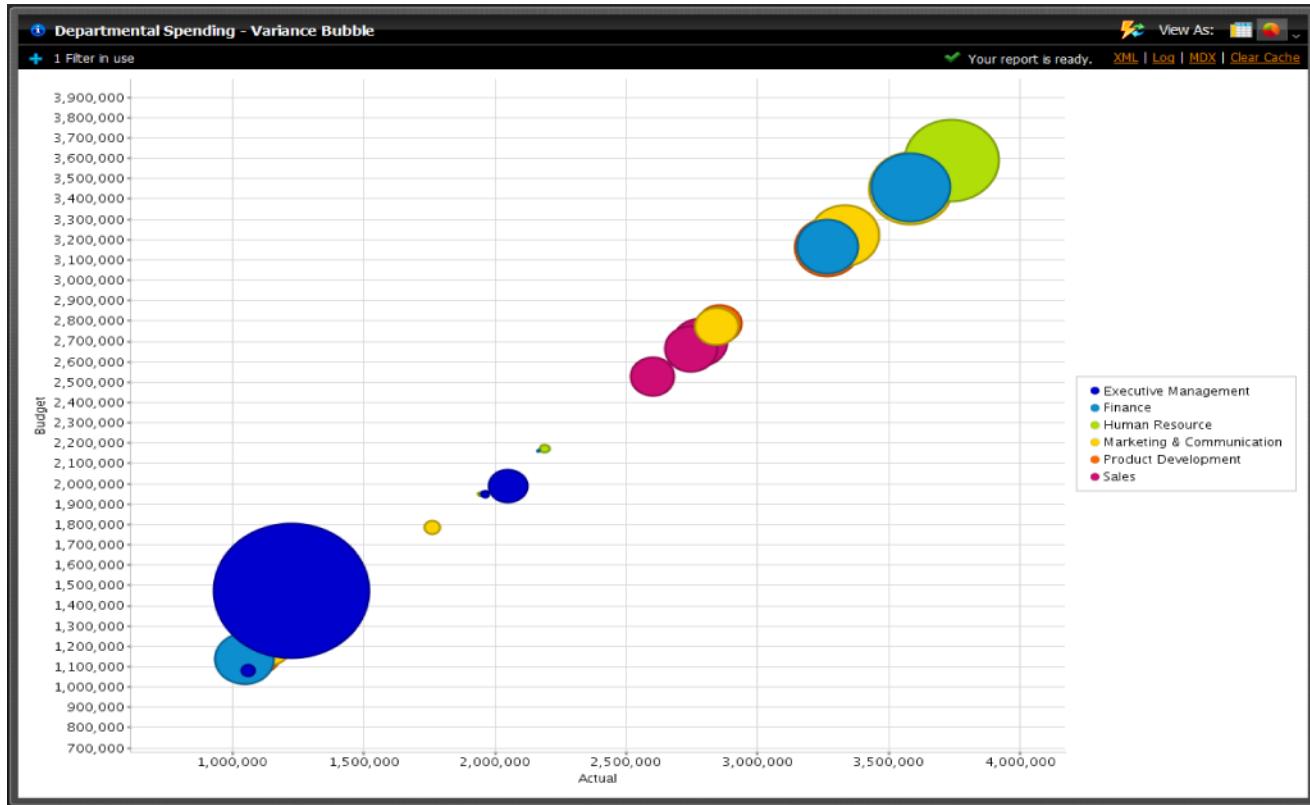

The **Color** drop-down box allows you to decide which colors denote large measures and which colors denote smaller measures. The color denotes the size of the data, from small to large. You have the option of choosing:

- Red Yellow Green
- Red Yellow Blue
- Blue Scale
- Gray Scale

You also have the option of checking the **Reverse Colors** box, which will allow you to choose the inverse colors so they appear large to small.

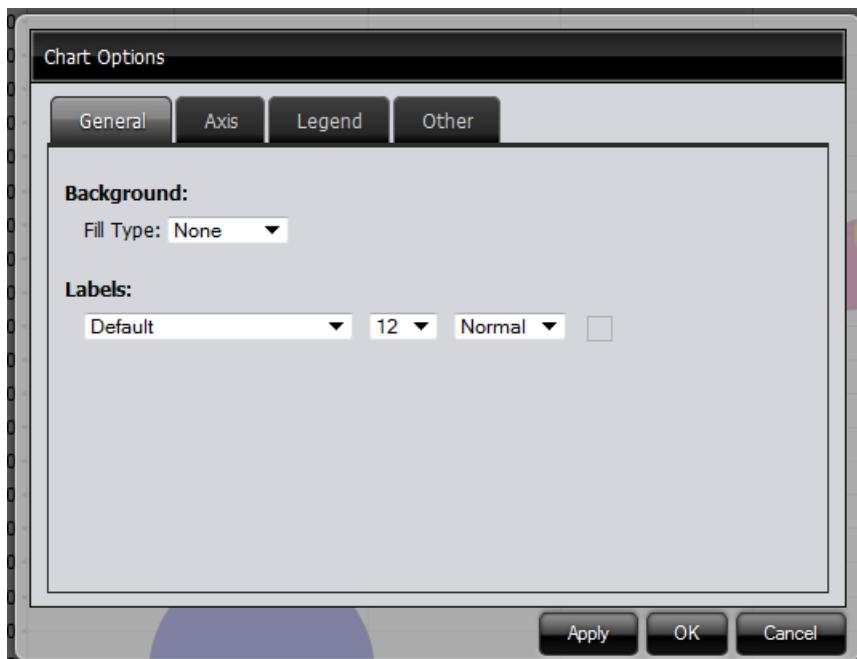

Scatter Chart Visualizations In Analyzer

Scatter charts allow users the ability to visualize data on a graph. This visualization type will plot a bubble on a graph based on the attributes used. You can then use a measure to color-code the bubble and/or use a measure to specify the size of the bubble.

Change Scatter Chart Visualizations In Analyzer

The **Properties** panel enables you to customize the appearance of scatter chart visualizations. Click the **Chart Options** button in the **Properties** to make the **Chart Options** dialogue box appear.

The **Chart Options** drop-down box allows you to customize your chart. Within the four different tabs, you have the ability to choose:

- Chart fill type. If you choose a fill type other than none, you can customize the color (or colors if you choose a gradient).
- Font type, size and emphasis for the labels
- Axis ranges
- Legend visibility
- Legend position
- Legend Background appearance (if it appears and if so, what color)
- Font type, size, and emphasis for the Legend
- For multi-charts, the number of charts per row
- The Domain Limit maximum number of plot values

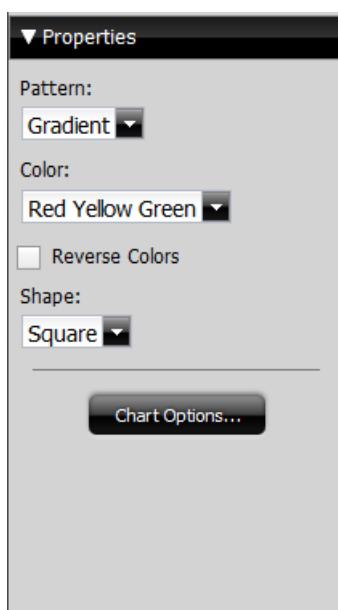

Heat Grid Visualizations In Analyzer

Heat Grids allow you the ability to visualize data so you can identify patterns of performance. This visualization type will color-code your results so you view complex business analysis in an easy-to-understand visualization.

Change Heat Grid Visualizations In Analyzer

The **Properties** panel enables you to customize the appearance of map visualizations.

The **Pattern** drop-down box allows you to decide the way the color of the pins populate. The appearance does not denote any of the data, it is solely for aesthetics. You have the option of choosing:

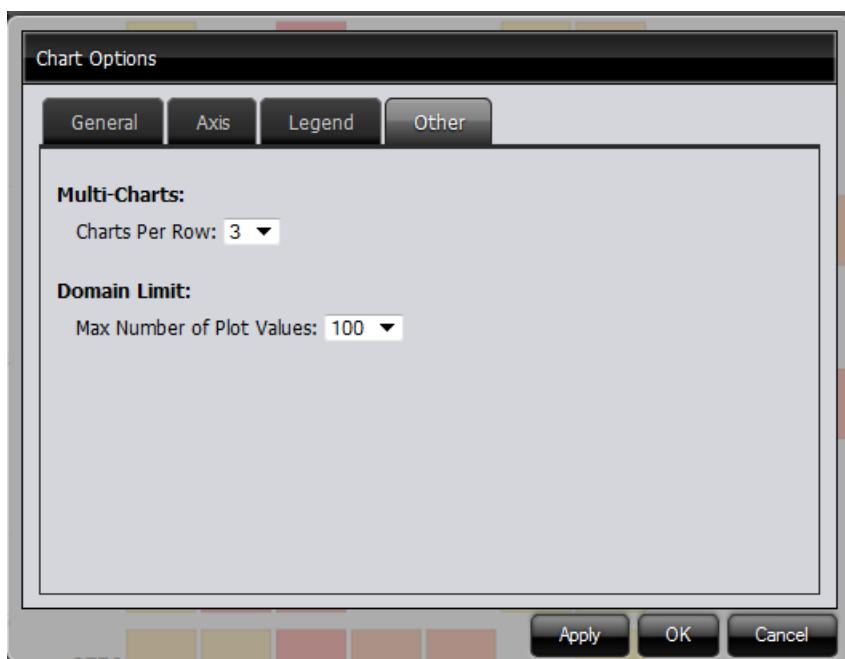

- Gradient
- 3 Step
- 5 Step

The **Color** drop-down box allows you to decide which colors denote large measures and which colors denote smaller measures. The color denotes the size of the data, from small to large. You have the option of choosing:

- Red Yellow Green
- Red Yellow Blue
- Blue Scale
- Gray Scale

You also have the option of checking the **Reverse Colors** box, which will allow you to choose the inverse colors so they appear large to small. You may also change shape of the measures in the **Shape:** drop-down box. The measures can be alternated between **Square** to **Circle**.

The **Properties** panel enables you to customize the appearance of scatter chart visualizations. Click the **Chart Options** button in the **Properties** to make the **Chart Options** dialogue box appear.

The **Chart Options** drop-down box allows you to customize your chart. Within the four different tabs, you have the ability to choose:

- Chart fill type. If you choose a fill type other than none, you can customize the color (or colors if you choose a gradient).
- Font type, size and emphasis for the labels
- Axis ranges
- Legend visibility
- Legend position
- Legend Background appearance (if it appears and if so, what color)
- Font type, size, and emphasis for the Legend
- For multi-charts, the number of charts per row
- The Domain Limit maximum number of plot values

Use Dashboard Designer

Creating a dashboard in Dashboard Designer is as simple as choosing a layout template, theme, and the content you want to display. In addition to displaying content generated from action sequences, Interactive Reporting, and Analyzer, Dashboard Designer can also include:

- **Charts:** simple bar, line, area, pie, and dial charts created with Chart Designer.
- **Data Tables:** tabular data.
- **URLs:** Web sites that you want to display in a dashboard panel.

Dashboard Designer also has dynamic filter controls, which enables end-users to change a dashboard's details by choosing different values from a drop-down list, and to control the content in one dashboard panel by changing the options in another (content linking).

 **Note:** All graphics displayed in this section show the *Onyx* theme.

Create a New Dashboard

You must be logged into the User Console. Use these steps to create a new dashboard.

1. From the User Console **Home** page, click **Create New**, then select **Dashboard**.
2. On the bottom of the page, click the **Properties** tab, and enter a title for your dashboard page in the **Page Title** text box.
The name you entered appears on the top left corner of the dashboard. This name helps you identify the page if you want to edit, copy, or delete it later.
3. Click **Templates** to choose a dashboard layout.
A blank dashboard with the layout you selected appears.
4. Click **Theme** to choose a theme for your dashboard.
The theme you selected is applied to your dashboard.

You now have the basic framework for a Pentaho dashboard.

Work with the Chart Designer

The Chart Designer allows you to create bar, pie, line, dial, and area charts that can be added to a dashboard. Below are the general steps associated with creating a chart:

1. Select a data source.
2. Build a query.
3. Set the data definitions: values, series, category.
4. Select a chart type and theme.
5. Enter labels for the chart title, and x,y axes.
6. If applicable, adjust scaling and label rotation.
7. Place your chart in the dashboard.
8. Save your dashboard.

If you are new to charting, here are guidelines that may help you determine what type of chart is best suited for the data you want to present in your dashboard:

Bar Charts

If you want to compare items during a specific time period, consider using a bar chart. Key words to think about when creating a bar chart are *compare* or *rank*. For example if you want to compare items sold to show which one made the most profit, you might create a bar chart that ranks the products from the lowest to highest profit. The bar's length determines its ranking; the label identifies the item. Bar chart data can be presented horizontally or vertically depending on your requirements.

Pie Charts

If you are comparing parts of a whole, consider using a pie chart. Key words associated with charts include, *portion*, *share*, and *percentage*. If for example, you want to demonstrate the proportion of the company's budget spent on health insurance, use a pie chart. To make the chart easier to read, limit the number of slices to five. Pie charts can also be *exploded*, which means certain slices are pulled away from the remainder of the chart for emphasis.

Line Charts

Line charts are useful for showing changes over time. Key words associated with data that is best suited for a line chart are *trend*, *growth*, and *decline*. If, for example, you want to show how product sales have changed over five years, use a line chart. The slope of the line helps users quickly identify the direction of the trend.

Dial Charts

Dial charts are often associated with Key Performance Indicators (KPIs). Dial charts are circular and contain a scale, a needle, and one or more dial sectors. The dial sector is used to identify a specified area on a dial chart using a particular color. For example, you could have a dial plotting inventory with a minimum dial value of 10000 and a maximum dial value of 50000. There could be a red dial sector for the region between 2000 and 4000 indicating that if the needle is in this area, there is a danger of a supply inventory shortage.

Area Charts

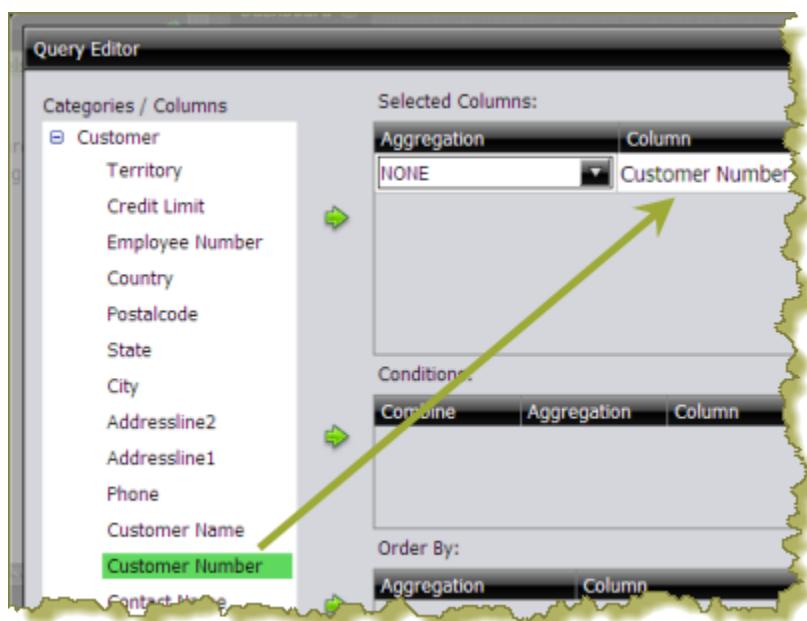

Area charts can be used to show a comparison of the same thing during different points in time. Area charts are not designed to provide exact data but they do give users visual clues of the relative sizes of the items they are representing.

Add Data to a Chart

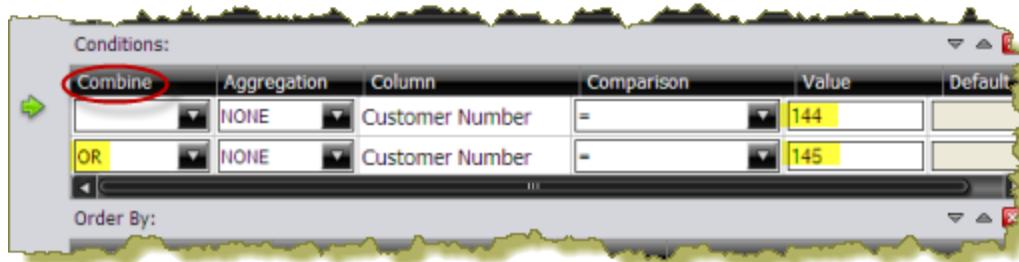

Before you can start creating a chart you must choose a data source that contains the data you want to use. You must then define the data that will be displayed in the chart. If you are unsure what chart type is best for displaying your data, see [Choosing the Correct Chart Type](#) for more information.

Use these steps to add data to your chart.

1. In the Dashboard, choose a dashboard panel and click  (Insert) and choose **Chart**.
The **Select a Data Source** dialog box appears.
2. Select the data source from the list of available choices. The data source contains the content you want to display in your chart.
The **Query Editor** appears.
3. The Query Editor allows you to retrieve dynamic data from a database for display in a chart. Defining your query is the first step in ensuring that the correct data is selected. In the Query Editor, click (+) next to a category name to display its associated table columns.
4. Click the small green arrow to place the column name under **Selected Columns**. In the example below, the **CustomerNumber** column has been selected and moved under Selected Columns. Notice that the column names appear under Selected Columns. Continue adding columns as needed.

- Now add the **Conditions**; these are your constraints that filter what you are choosing. You can add multiple conditions. In the example below, the search is limited to customer numbers.

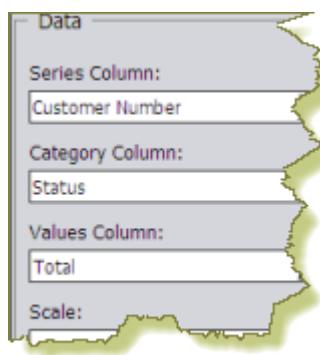

Under **Combine**, you can choose your constraint (and, or, and not, or not) from the drop-down list. Under **Comparisons** you can click the drop-down list to display options for comparisons, =, <, >, and so on; (for example, where the customer number is *equal* to 144 or 145). You can also choose an aggregation type from the drop-down list for table columns that contain numeric data. The table below contains a definition for each aggregate type:

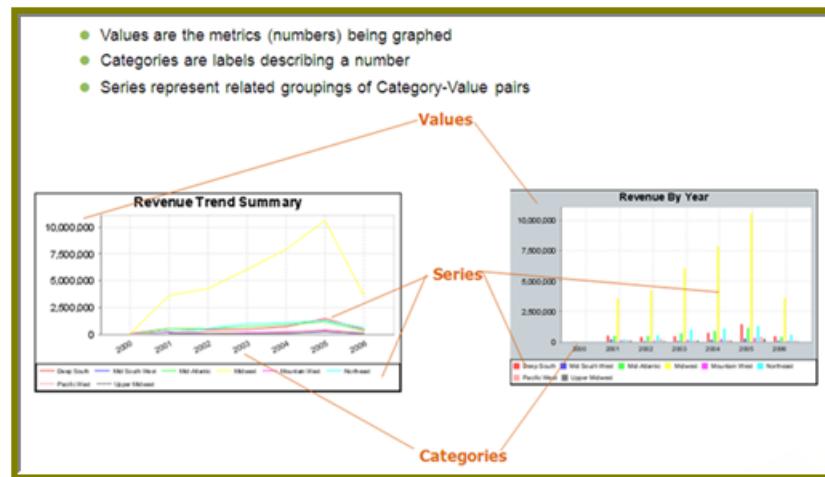

Aggregate Type	Description
SUM	Sums a column's values
COUNT	Counts a column's values
AVG	Averages a column's values
MIN	Selects the minimum column value
MAX	Selects the maximum column value

Click **Preview** at any time to view the data associated with your query.

- Add the columns that you want to **Order By**. The ordering of the selected data is accomplished by one or more columns in a table. For example, you can sort the data by customer name and address.
- Click **OK** in the Query Editor when you are done. The Chart Designer appears.
- Under **Data**, click the drop-down arrow to display and choose the table columns.

Data Definition	Description
Series Column	Series show up as the individual columns on a bar chart and as individual lines in a line chart. Area charts display each series as a point.
Category Column	Categories are displayed as bars or groups of bars on the x-axis (horizontal axis). In line charts, categories are usually associated with time periods. In area charts, the x-axis displays the category labels. If you don't want to display categories, choose None .
Values Column	The value is always numeric. The value determines the height of columns in a bar chart and the height of lines in a line chart. In area charts, the y-axis values determine the heights of the points.

A preview of the chart appears in a box in the upper-right corner of the Chart Designer as you choose your options.

9. Under Chart Type, click a chart type to choose it.

By default, pie and dial charts display in "animated" Flash mode. You can turn animation off by disabling the **Animated** check box in the Chart Designer. Animated charts bring focus to important aspects of your data. For example, animation allows you to bring out a data point if it reaches a critical value, such as high or low sales numbers.

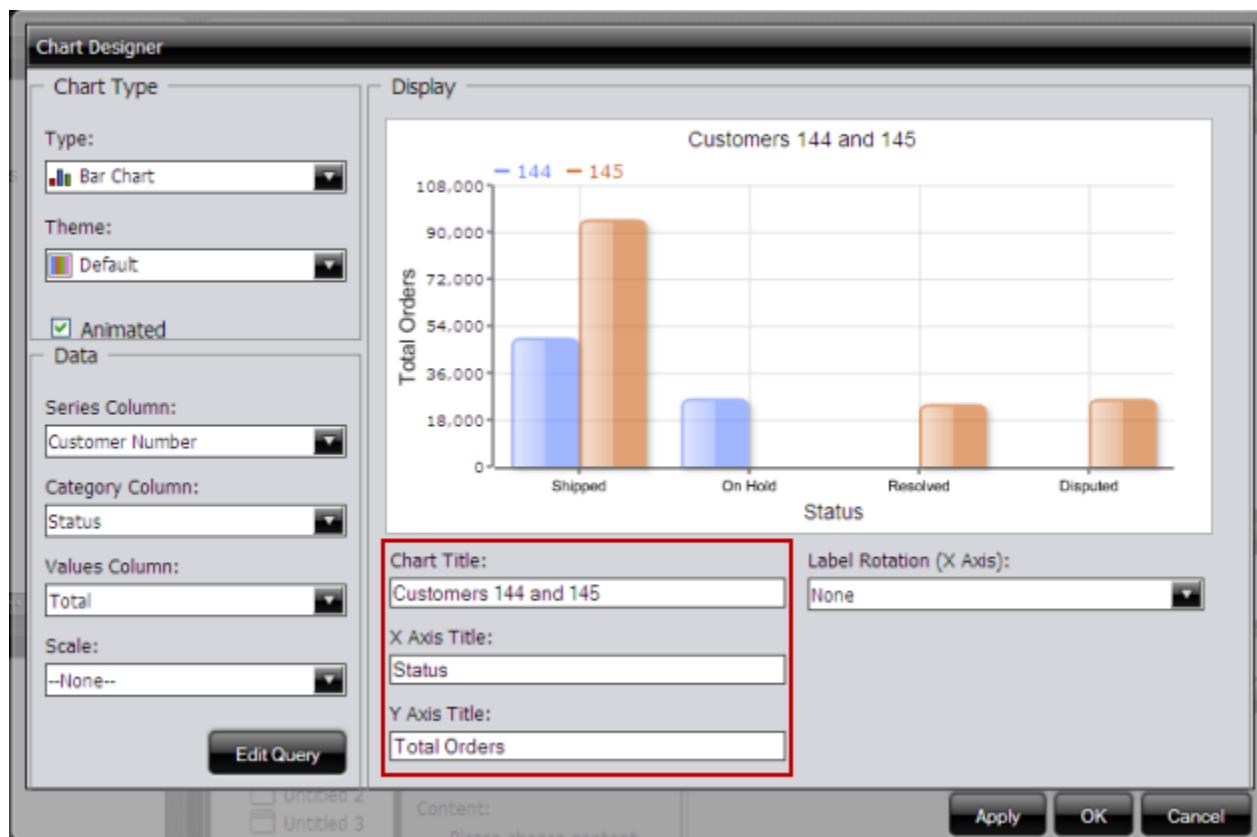

If you selected a pie or dial chart, see [Working with Pie Charts](#) or [Working with Dial Charts](#), respectively.

10. Under Theme, choose a theme from the list.

The theme is applied to your chart.

11. Enter the labels for the Chart Title, X Axis Title (horizontal axis), and **Y Axis Title** (vertical axis).

Entries are displayed in the chart preview.

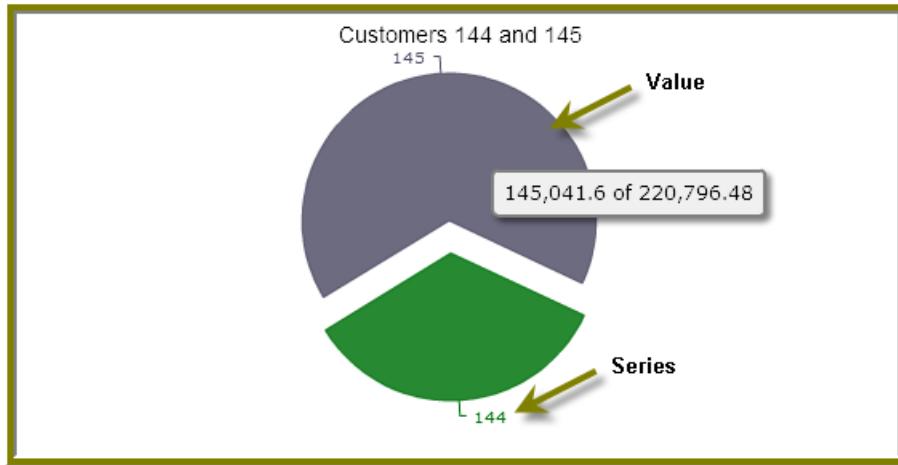

12. Click **Apply** to see the chart preview.

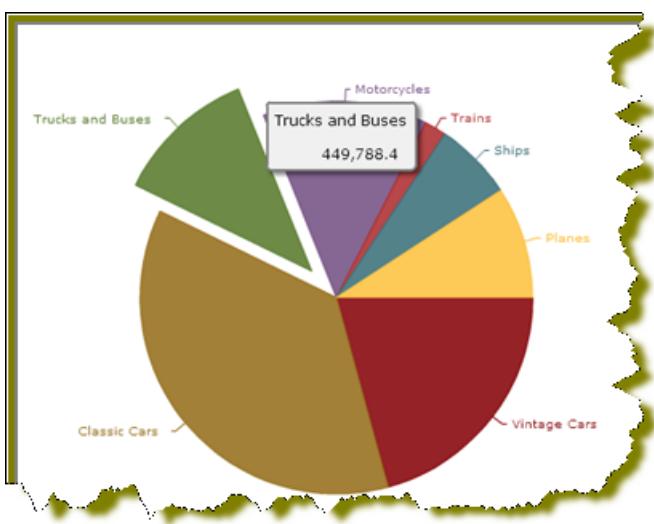

13. Click **OK** display your chart in the dashboard panel.

Work with Pie Charts

A pie chart gives dashboard consumers an immediate visual clue of the relative sizes of the shares of a whole. Categories are represented by individual slices. The size of the slice in a pie chart is determined by the value.

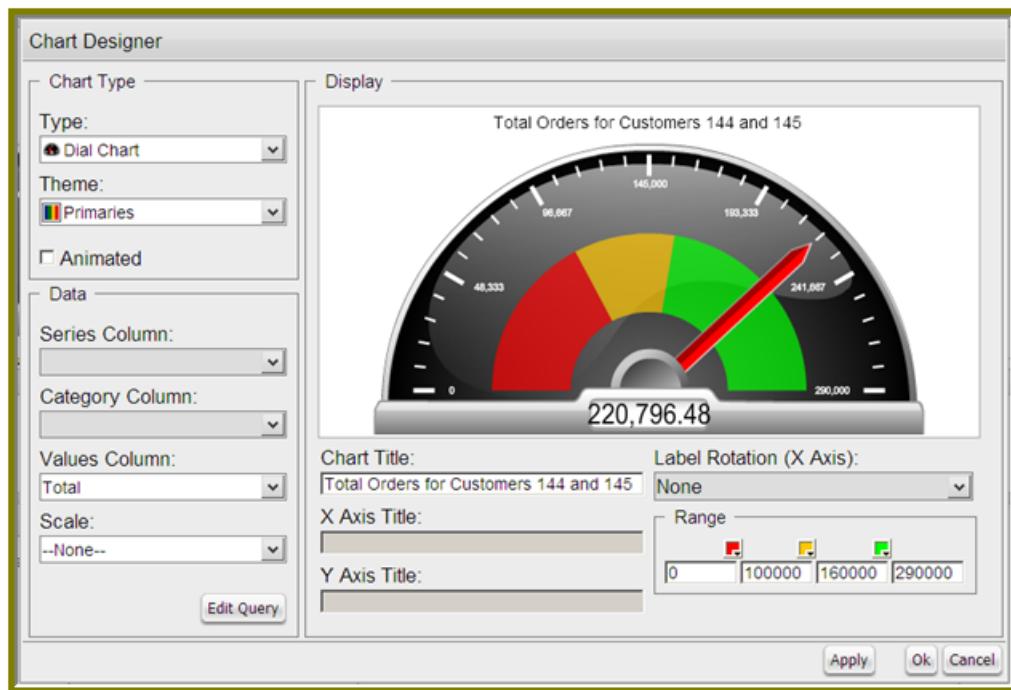

You can animate a pie chart if you want its pieces to be *exploded*, which means that the individual slices of the pie can be pulled away from the rest of the pie.

To animate a pie, enable **Animated** check box in the Chart Designer.

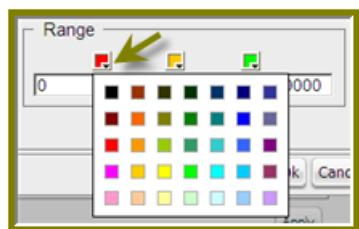

Work with Dial Charts

For dial charts to display correctly, you must enter values for your range and the chart title. In the example below, the dial chart preview is displaying ranges associated with sales. Notice that each dial sector is represented by a color, red, yellow, or green. The needle is positioned in the 220796.48 range, indicating that total orders, while not stellar, are not near the danger zone indicated by the red sector in the dial.

Changing Dial Sector Colors

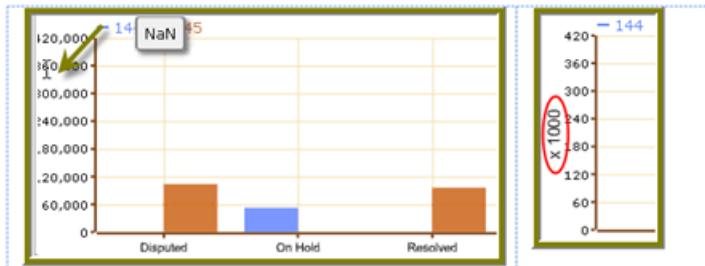

You can change the color of a dial sector by clicking the small down arrow in the color boxes associated with Range. Select a color from the palette so that you can preview it on your dial chart. Click **Apply** to preview your dial chart. Click **OK** to place your dial chart into the dashboard.

Correct Scaling Issues

Use the scaling feature in instances where numeric values in a chart are so long that they affect the display.

1. Preview your chart in the Chart Designer.
2. Under **Scale**, click to display the drop-down list of scaling options. In the example below, the scaling option used is "1000." Notice the change in the display of numeric values when scaling is applied. Users of the chart can see actual values when they hover over the bars in the chart.

3. Click **OK** to display the chart in the dashboard.

The scaling feature is available for all chart types except pie.

Rotate Chart Axis Labels

If your chart axis labels become unreadable because they are too long, **Label Rotation** may correct the problem.

1. In the Chart Designer, display your chart.
2. Under **Label Rotation**, choose **Diagonal** or **Vertical** and click **Apply**.
The labels display with the rotation you set.
3. Click **OK** to display the chart in the dashboard panel.

Edit a Chart

Use these steps to edit a chart.

1. In the Dashboard Designer, choose the panel that is displaying the chart you want to edit.
2. In the upper right corner of the panel click (Edit)
The Chart Designer appears.
3. Click **Edit Query**.
The Query Editor opens.
4. Edit the query as needed and click **OK**.
The Chart Designer appears.
5. Select the appropriate data definitions to build the chart.
6. If applicable, change the chart type and theme and click **Apply** to see a preview of the edited chart.
7. Click **OK** to display the chart in the dashboard.

Add a Data Table to a Dashboard

The Data Table feature allows you to display a tabular representation of a database query in a dashboard. It also allows you and consumers of the dashboard to manipulate the display of the data in the data table, while in the dashboard. For example, users can resize, sort, and change the order of columns. Follow the instructions below to add a data table to your dashboard.

1. Select a panel in the Dashboard Designer.
2. Click (Insert) and choose **Data Table**.
The **Select a Data Source** dialog box appears.
3. Select a data source from the list of available data sources and click **OK**.
The Query Editor opens.
4. Begin building your query. Click (+) next to the category name to display its associated table columns. When the column names appear, click to choose the column that contains the data you want displayed in your data table.
5. Click the small yellow arrow to place the column name under **Selected Columns**.

6. Now add the **Conditions**; these are your constraints that filter what you are choosing. You can add multiple conditions.

Under **Combine**, you can choose your constraint (and, or, and not, or not) from the drop-down list. Under **Comparisons** you can click the drop-down list to display options for comparisons, =, <, >, and so on; (for example, where the customer number is *equal* to 144 or 145). You can also choose an aggregation type from the drop-down list for table columns that contain numeric data. The table below contains a definition for each aggregate type:

Aggregate Type	Description
SUM	Sums a column's values
COUNT	Counts a column's values
AVG	Averages a column's values
MIN	Selects the minimum column value
MAX	Selects the maximum column value

Click **Preview** at any time to view the data associated with your query.

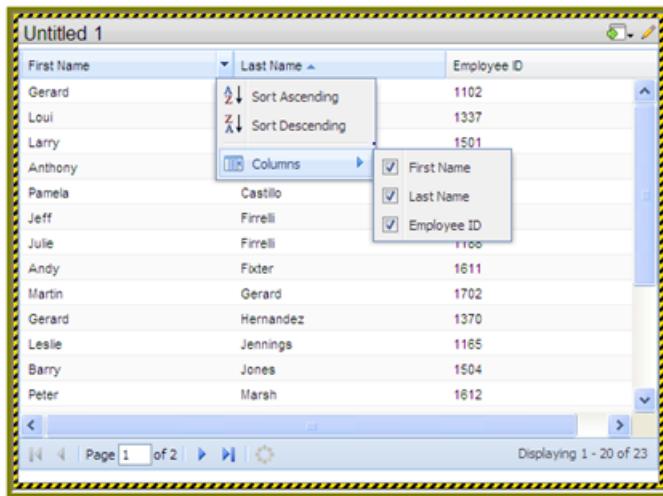

7. Add the columns that you want to **Order By**. The ordering of the selected data is accomplished by one or more columns in a table. For example, you can sort the data by customer name and address.
 8. Click **OK** in the Query Editor when you are done.
 The Data Table appears in the dashboard panel.

Update the Data Table Display

You can edit the data table display directly in the dashboard panel.

Sorting Column Data

To change the sort order data under a column, click the drop-down arrow in the header and choose **Sort Ascending** or **Sort Descending**. You can also hide one or more columns by disabling the appropriate check boxes next to the column names.

Adjusting Column Width

You can adjust the width of a column by clicking the right border of the column header and dragging it to the right or left. Release the mouse button when you are done.

Moving Columns

To move the placement of a column, click and drag the column it to the appropriate location in the Data Table as shown in the example below:

First Name	Last Name	Employee ID
George	Vance	1323
Foon Yue	Vance	1286
Leslie	Thompson	1166
Mary	Patterson	1056
Steve	Patterson	1216
Mami	Nishi	1621
Diane	Murphy	1002
Peter	Marsh	1612
Barry	Jones	1504
Leslie	Jennings	1185
Gerard	Hernandez	1370
Martin	Gerard	1702
Andy	Fixter	1611

Paginating

The pagination feature allows you to page through a large number of records.

First Name	Last Name	Employee ID
Gerard		1102
Lou		1337
Larry		1501
Anthony		1100
Pamela	Castillo	
Jeff	Firrelli	
Julie	Firrelli	
Andy	Fixter	1611
Martin	Gerard	1702
Gerard	Hernandez	1370
Leslie	Jennings	1185
Barry	Jones	1504
Peter	Marsh	1612

Add a Report Designer Report to a Dashboard

Use these steps to add a report created with Report Designer.

1. Select a panel in the Dashboard Designer.
2. Click  (Insert) and choose **File**.
A browser window opens.
3. Locate the appropriate report file.
4. Click **Select** to place the report inside the dashboard panel.

Pagination control arrows at the top of a report allows you to scroll through long reports. Notice that the report file name, *Inventory.prpt*, appears under **Content**: in the dashboard edit pane in the sample below. This sample report contains parameters. You can enter values manually and link them to a dashboard filter in the text boxes under **Source**. When the report renders again, the parameter value(s) you entered are included in the report.

The screenshot shows a dashboard titled "Steel Wheels" with a subtitle "Corporate Buying Detail Inventory Report As of July 1". The main content is a table titled "LINE: Classic Cars" showing three items:

Vendor	BAR CODE	SKU	Name	Scale	On Hand	Cost	MSRP
Autoart Studio Design		S12_1099	1968 Ford Mustang	1:12	68 units	\$ 95	\$ 199
Carousel DieCast: Legends		S24_1628	1966 Shelby Cobra 427 S/C	1:24	8,197 units	\$ 29	\$ 50
		S24_2840	1958 Chevy Corvette Limited Edition	1:24	2,542 units	\$ 16	\$ 39

Below the table, there is a note: "Description: Hood, doors and trunk all open to reveal highly detailed interior features. Steering wheel actually turns the front wheels. Color dark green." and another note: "Description: This diecast model of the 1966 Shelby Cobra 427 S/C includes many authentic details and operating parts. The 1:24 scale model of this iconic lightweight sports car from the 1960s comes in silver and it's own display case."

The bottom section shows the "Objects" panel with "General Settings" and "Filters" selected, and the "Content" section containing "Inventory.prt". The "Parameters" panel is also shown, with parameters like "line", "HideBarSection", "showNotes", and "output-target" set to their respective values.

Important: If you choose a Report Designer file to place in a dashboard, but do not supply values for required parameters, the report will show up blank.

Add an Analyzer Report to a Dashboard

Use these steps to display an Analyzer report in a dashboard.

1. Select a panel in the Dashboard Designer.
2. Click **Insert** and choose **File**.
3. Locate the appropriate Analyzer report and click **Select**.
The Analyzer Report appears inside the dashboard panel.

Add a Web Site to a Dashboard

Use these steps to display contents of a Web site in a dashboard panel.

1. Select a panel in the Dashboard Designer.
2. Click (Insert) and choose **URL**.
The **Enter Web site** dialog box appears.
3. Enter the Web site URL in the text box and click **OK**.
4. If applicable, click (Edit) to make changes.
5. Save your dashboard when you are done.

Use Prompts on Dashboards

Prompts display a subset of data based on the dashboard user's point of view. For example, a European user may only want to see EMEA region sales data, whereas the dashboard's default region is the NA region. To ensure that a prompt links to the correct content in a dashboard, the content to which you are linking (data table or chart) must contain at least one parameter.

Below are general instructions below for adding prompts to your dashboard:

1. In the dashboard page, choose **Edit** (the pencil icon), which will make the **Objects** pane appear.
2. Under **General Settings**, choose **Prompts**.
The **Prompts** pane appears on the right. No prompts are listed if this is the first time you are assigning prompts.
3. To display a prompt toolbar to users of the dashboard, enable **Show Prompt Toolbar**.
The prompt toolbar appears at the top of the dashboard.
4. Click the **Add** button to start adding prompts.
The **Prompts** dialog box appears.
5. In the **Prompts** dialog box, enter a display name for the control label. For example, "Region."
6. Enable **Display Name as Control Label** if you want users to see the display name in the prompts toolbar.
7. Select your control type. Control types define how your prompt values are selected; for example, in a drop down list, radio button, check box, and so on.

The table below contains a description of each control type.

Control Type	Description
Drop Down	Users choose a prompt value from a drop-down list.
List	Users choose a prompt value from a scrolling list. This prompt control supports multiple selections.
Radio button	Users click a radio button to choose a prompt value.
Check box	Users enable a check box to choose a prompt value. This prompt control supports multiple selections.
Button	User click a button to choose a prompt value. This prompt control supports multiple selections.
Text Field	Users enter a text string or number into a text field manually.
Date Picker	Users examine prompt values based on calendar date.

Your dashboard now has a prompt.

If you plan to provide hard-coded names and values for your dashboard users, or produce a dynamic prompt list, continue on to the next few sections.

Add a Prompt to a Dashboard

You can create a prompt tool bar that enables users to refine report results in a dashboard. First create the **Prompt Toolbar**. Then customize the toolbar so that the appropriate options appear.

Creating a Prompt Toolbar for Dashboards

1. Open a dashboard that contains at least one parameterized report.
2. Click the **Edit Content** icon to open the editing options in the dashboard.
3. In the bottom section, inside the **Objects** pane, choose **Prompts** to access the Prompt pane.
4. Click **Show Prompt Toolbar** to display the prompt toolbar to dashboard users.
5. Click **Add** to add a prompt.
The **Prompts** dialog box appears.
6. In the **Name** field, enter the title for the prompt toolbar.

7. In the **Control** box, click the format for the prompt options. For example, you can choose the **Drop Down** control if you want a list that appears when users click the first option.
8. Ensure that **Static List** is selected under **Type**.

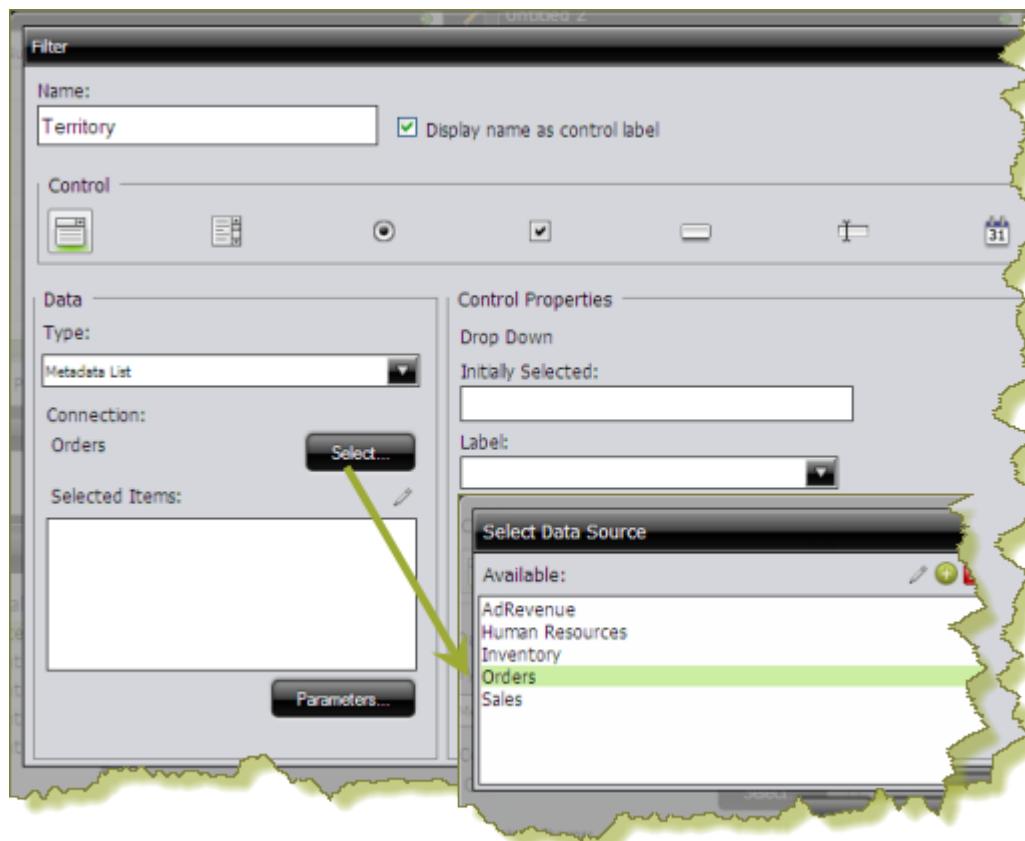

Customizing a Prompt Toolbar for Dashboards

1. In the **Data** box, click **Add**.
The **List Value** dialog box appears.
2. In the **Label** field, enter the option name as you want it to appear to dashboard users.
3. In the **Value** field, enter the parameter source name. For example, using the Steel Wheels sample, enter **Classic Cars**.
4. Add labels and values for each parameter you want to filter. Click **Close** to exit the **List Value** dialog box.
If you are filtering an Analyzer report and using a static list, you can add the option **All**. This option drops the filter from the report and shows all values.
5. In the **Control Properties** box, under **Initially Selected**, choose which item you want to appear first in the prompt list. Choose **Use First Value** to set the default to the first value in the list, or you can choose **Specify** if you want a specific value to appear first.
6. Click **OK**.
7. In the **Objects** pane, choose the title of the report you want to filter. Click the **Parameters** tab and choose the correct **Source** for the parameter from the list. The source should be the name of your prompt.
8. Click **Save**.

Create a Metadata List

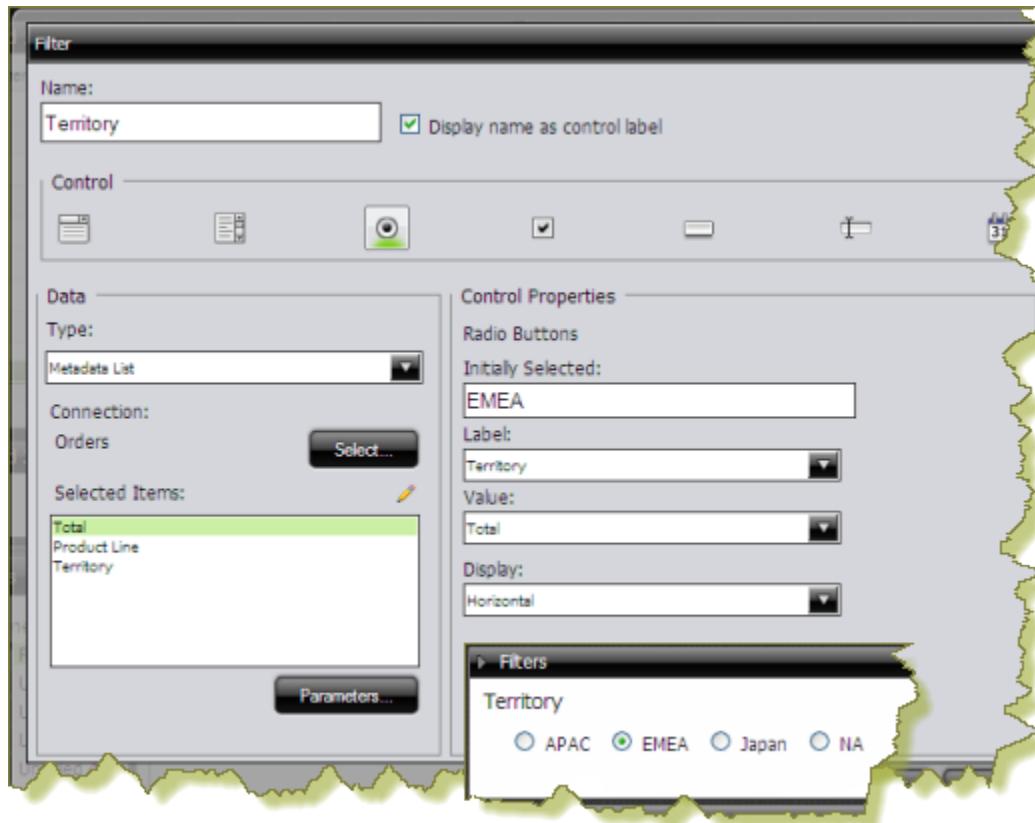

You must have a data table or chart that contains at least one parameter for your prompt control to function correctly.

When you create a Metadata List, you are defining a query to retrieve a list of display names and corresponding values from a metadata data source provided by your administrator.

1. In the dashboard page, under **General Settings**, choose **Prompts**.
The Prompt Editor appears on the right. No prompts are listed if this is the first time you are assigning prompts.
2. To display a prompt toolbar to users of the dashboard, enable **Show Prompt Toolbar**.
A placeholder for the prompt toolbar appears at the top of the dashboard.

3. Click  (Add) to add a prompt.
The **Prompts** dialog box appears.
4. In the **Prompts** dialog box, enter a **Name** for your prompt.
5. Under **Data Type**, choose **Metadata List**.
6. Click **Select** to choose the data source that contains the content you need to set options from the drop-down list and click **OK**.
The **Query Editor** opens.
7. In the **Query Editor**, build a query to choose either a single column (that represents both a name and a value), or two columns representing the display names and corresponding values.
If a single column query is defined, the values of that column will be used for both the display names and the values.
8. Click **OK** to exit the Query Editor.
Your options appear under **Selected Items** in the Prompts dialog box.
9. Under **Control Properties**, enter a **Default Label/Value** for the *initially selected* option in your prompt control.

10. Select a **Label** to display in the prompt control; this is the user-friendly name that users will see in the dashboard.
11. Select the **Value**; this is the value in the database that is associated with the Label you selected in the previous step.
12. If applicable, choose your **Display** type from the list.

Some prompt controls allow you to choose the position of your prompt options. If you have a long list of options, for example, a list of cities, options may not appear correctly in the user console unless you change the Display type to **Horizontal**.

13. Click **OK**.

The list of values appear in the prompts toolbar in the dashboard.

Create a Cascading Prompt

A cascading prompt changes based on a value a user selects. When the value in the drop down list, (Country), changes, the prompt is automatically applied to the second prompt, (City) thus changing its values.

Filters

Country: USA

City:

- Allentown
- Boston
- Brickhaven
- Bridgewater
- Brisbane
- Burbank
- Burlingam
- Glendale
- Las Vegas
- Los Angeles
- NYC
- Nashua
- New Bedford
- New Haven
- Philadelphia
- Portland
- San Francisco
- San Jose
- San Rafael
- White Plains

The example above was created using a Metadata List for the drop-down prompt (Country).

Filter

Name: Country Display name as control label

Control

Control Properties

Drop Down

Initially Selected: USA

Label: Country

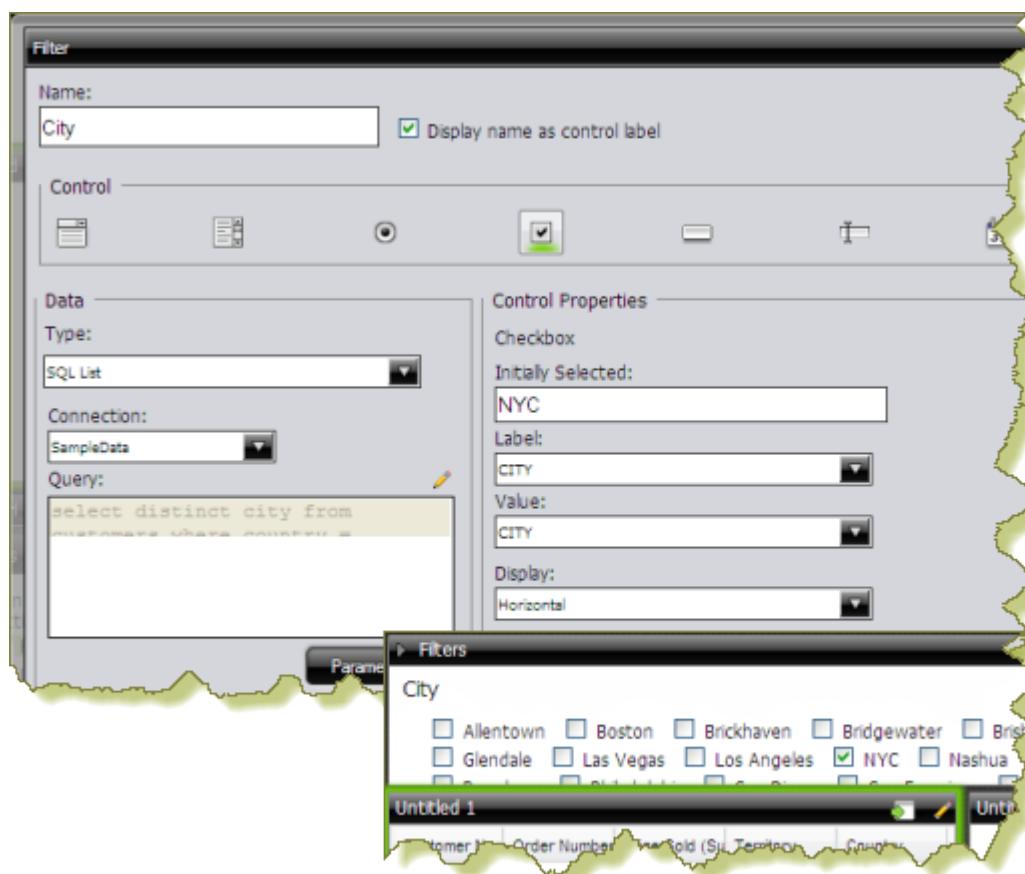

Value: Country

Filters

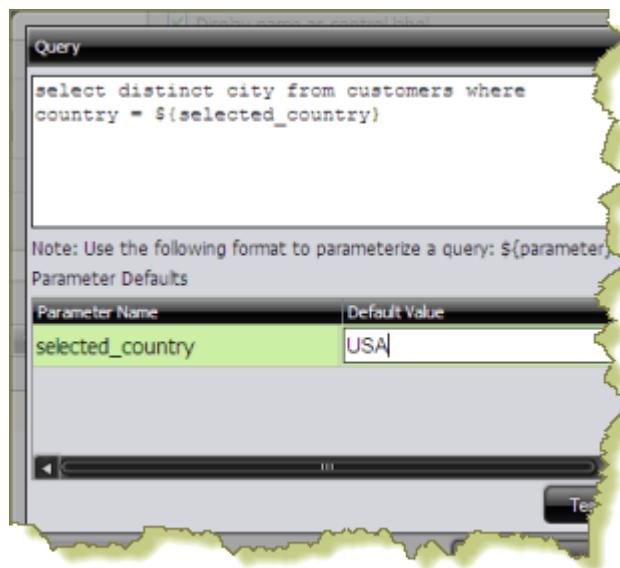

Country

- USA
- Ireland
- Israel
- Italy
- Japan
- Netherlands
- New Zealand

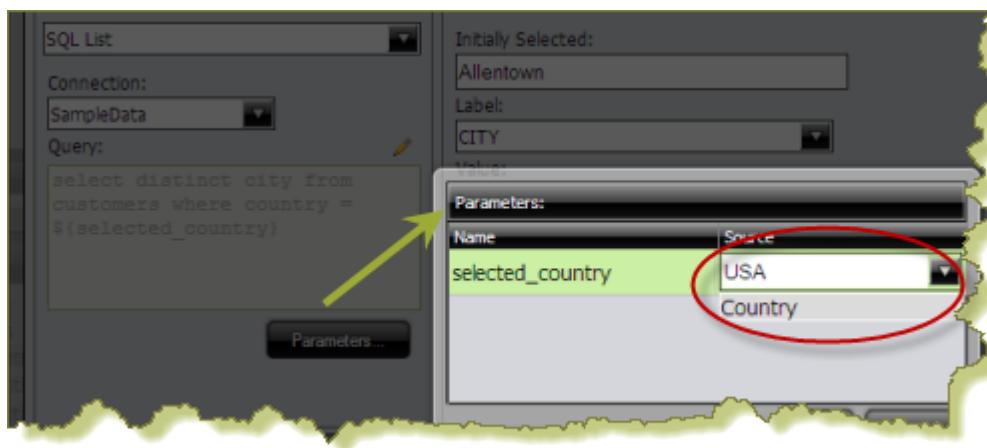

A SQL List that included a parameter, \${selected_country}, in its associated query was used for the check box prompt (City).

The **Default Value** for the **selected_country** parameter was set to **USA** with New York City (**NYC**) as the initially selected value for the check box prompt.

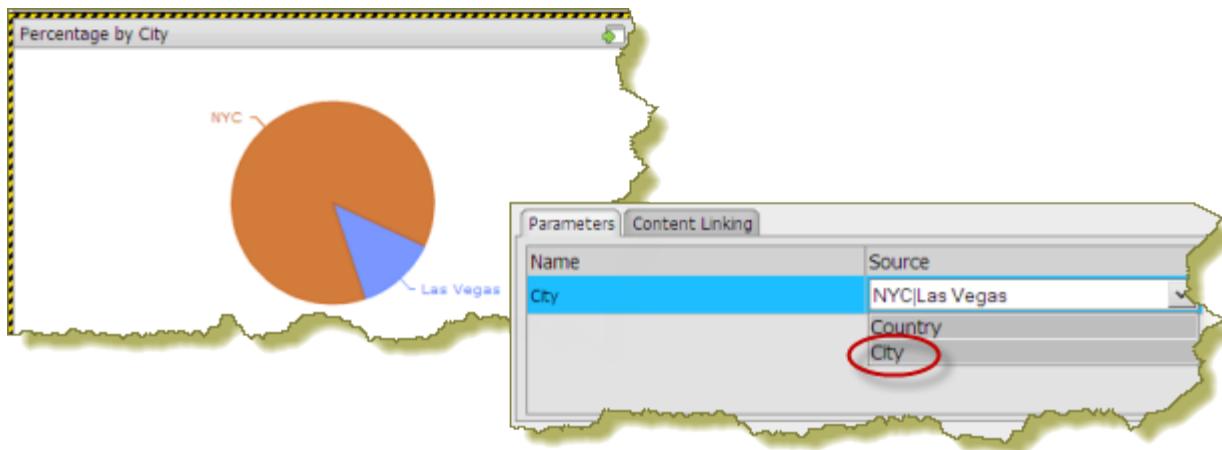

To link the City prompt to the Country prompt, another **Source** for the **selected_country** parameter was chosen. The alternate source is the **Country** prompt.

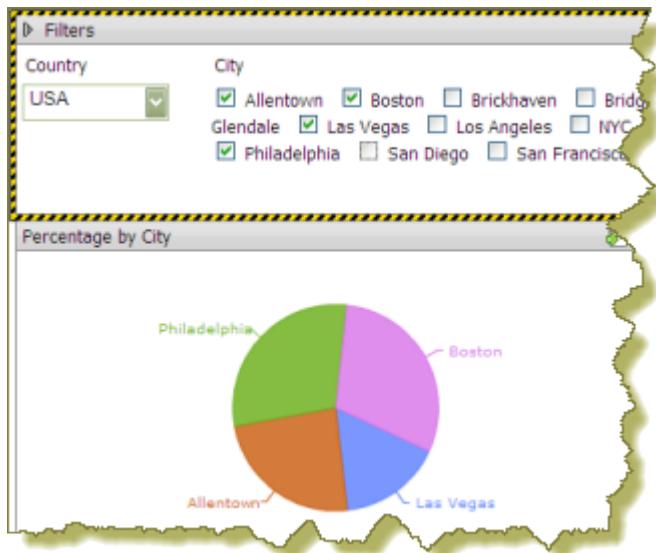

When the prompts are linked, users can choose a country and then choose a city (or cities) in the country of their choice.

Using this example, the report designer can now add a data table, chart, or other content in the dashboard that can be driven by the prompt he or she just created. Suppose the designer decides to add a pie chart to the dashboard. The pie chart will display the percentage of sales per city.

In the Query Editor, the report designer creates a parameter, {City}, with an extended default value: **NYC|Las Vegas**. The resulting pie chart displays values for New York City and Las Vegas. Under the Parameters tab associated with the pie chart, the **Source** value for the City parameter is changed to the **City** prompt.

When the report is saved, users of the dashboard can see results for a country and multiple cities in that country.

Edit Prompts

You can edit prompts as needed. Use these steps to edit prompts.

1. Locate the prompts pane at the top of the panes in the dashboard.
2. Located the different prompts and the drop-down menus next to them.
3. Select the prompt you want to edit and choose an alternative prompt from the drop down menu.
The prompt changes, causing the graphs and charts in the dashboard to change appropriately.

Link Dashboard Prompts to Analyzer Parameters

This process only applies to dashboards that include parameterized Analyzer reports. You must have an Analyzer report with a query parameter in it in order to proceed.

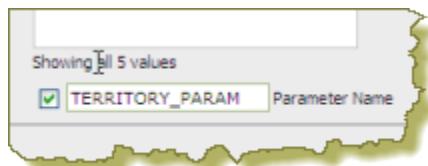

The instructions below explain how to parameterize an Analyzer report.

1. In Analyzer, choose a field in your report to which you want to link; then, right-click and choose **Filter**.

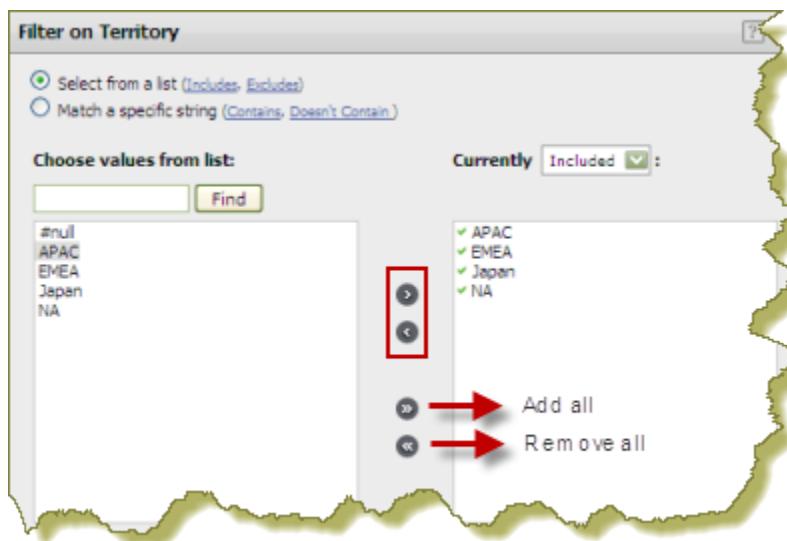

In the example below, data will be filtered by **Territory**.

		Classic Cars	Motorcycles	Planes	Ships
	Sales	Sales	Sales	Sales	
APAC	193,086	89,969	74,854	4,414	
	167,198	99,849	46,572	34,124	
	132,890	4,176	-	14,124	
	101,459	26,048	17,860	9,124	
	20,137	-	5,625	31,124	
	157,182	-	7,586	35,124	
	153,552	47,867	34,375	25,124	
	388,951	226,390	108,156	66,124	
	148,315	7,498	23,001	5,124	
	31,689	4,953	11,784	1,124	
	133,183	11,609	113,718	17,124	
	134,787	51,769	29,501	12,124	
	476,165	74,635	89,986	12,124	

2. In the **Filter** dialog box, enter a name for the parameter in the **Parameter Name** text box and click the check box to enable it.

3. Select the values you want associated with the parameter. Use the arrows to add values to the box on the right.

4. Click **OK** to exit the Filter dialog box.
5. Save your Analyzer report.

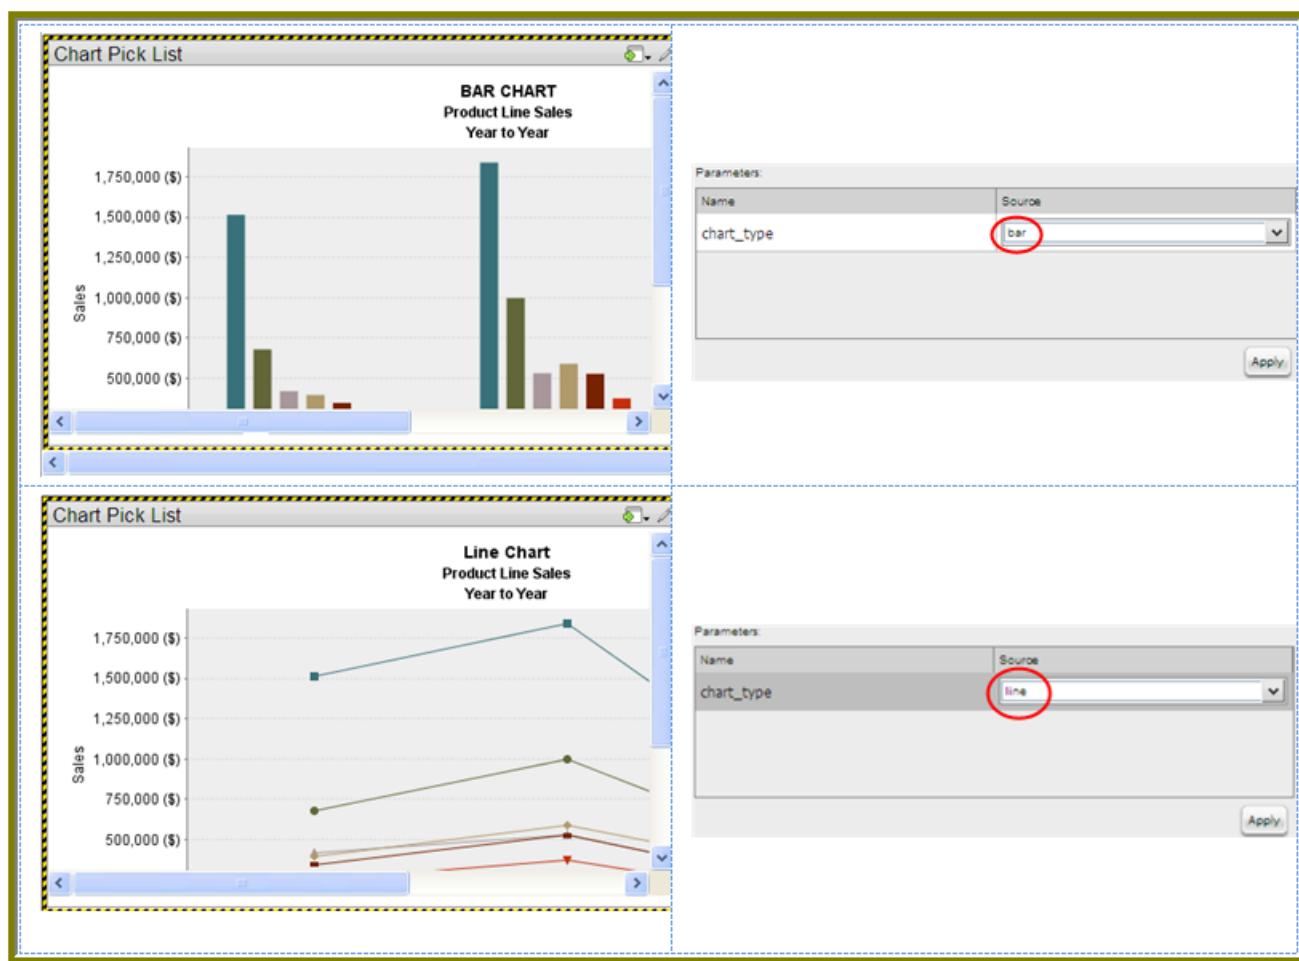

In the upper left corner of the report, you can see that a filter is in use. Click (Edit) to edit your filter; click to delete the filter.

Territory	Country	Line	
		Classic Cars	Motorcycles
	Sales	Sales	
APAC	Australia	193,086	89,9
	New Zealand	167,198	99

6. Create a dashboard and drag the Analyzer report into a panel.
- The name of the parameter appears in the lower portion of the dashboard under **Parameters**.
7. Add a filter to the dashboard based on the parameter you created in your Analyzer report.
- The filter appears in the dashboard.

Dashboard Parameters

If you are placing a file, such as an .xaction or .prpt, inside a dashboard panel, it is possible that the author of the file defined meaningful parameters for the content. If previously defined, the parameters and their associated default values, appear under **Parameters** in the edit pane of the dashboard. In the example below, when the chart initially rendered, it displayed a parameter called, "chart_type" with a default value called, "bar." A user can change the value of the parameter to see the content rendered as a pie, line, or area chart.

Parameter names are "hard-coded," in the file; that means they cannot be changed. Neither can you change the number of parameters associated with a file. When you create a chart using the Chart Designer, embed a URL into a dashboard, or create a data table, you can change both the name and value of a parameter.

In Windows, the URL Parameters have a maximum limit of 2,048 characters, minus the number of characters in the actual path.

Create Chart or Data Table Parameters With the Query Editor

When you place a chart in a dashboard panel, you use the Query Editor to retrieve data from a database for display on your chart or data table. If applicable, you can add conditions or constraints that filter the data so that the chart or data table displays the information you want dashboard consumers to see.

Using parameters is critical if you plan on using dashboard prompts or linking content in one dashboard panel to content on another dashboard panel. For example, suppose you create a pie chart and you want to filter details associated with an exploded pie slice in the adjoining data table as shown in the example below. In this instance, you must use a parameter that allows the data table to update when a dashboard consumer clicks on a pie slice. Optionally, you can parameterize the query condition so that the content is updated based on a user interaction, such as changing a prompt value.

The screenshot shows a dashboard panel with two main components. On the left is a pie chart divided into three segments: NA (orange), EMEA (blue), and Japan (purple). A callout bubble over the NA segment displays the text "5,008,224.36 of 10,645,949.18". On the right is a "Details Data Table" with the following data:

Territory	Country	Product Line	Total (SUM)
EMEA	France	Classic Cars	388951.2
EMEA	France	Motorcycles	226390.31
EMEA	France	Vintage Cars	176609.81
EMEA	France	Planes	108155.55
EMEA	France	Ships	66486.67
EMEA	France	Trucks and Buses	116982.22

Below the table are navigation buttons and the text "Displaying 1 - 20 of 79".

To create a parameter, in the **Value** field, enter the name of the parameter inside curly braces, as in **{Parameter Name}**. In the example below, the designer created a parameter called, **{TERRITORY}**; the default value, or source, for the parameter is, "NA" (North America). When a chart or data table renders, it displays data associated with North America. Remember that this is a *default value*. When you enclose a parameter name with curly braces, you are creating a *parameter query*. That means, that users can change the query dynamically by replacing the default, "NA," with a different territory acronym, (for example, EMEA), when the query runs.

The screenshot shows the "Conditions" dialog box with the following settings:

Line	Aggregation	Column	Comparison	Value	Default
	NONE	Territory	exactly matches	{TERRITORY}	NA

You can define multiple default parameter values by adding a pipe (|) between the values, as in NA|EMEA|APAC.

Suppose a dashboard designer chooses to limit the data to North America (NA) exclusively? In this instance, he or she would not include the curly braces around "NA," (as shown in the example below), and **Default (value)** is disabled. This is an example of a static query.

The screenshot shows the "Conditions" dialog box with the following settings:

Line	Aggregation	Column	Comparison	Value	Default
	NONE	Territory	exactly matches	NA	

Dynamic Dashboard Titles

While in Dashboard, each panel has the ability to show a title with current parameters.

1. Click the edit (pencil) icon in the top toolbar.
The Edit Pane appears at the bottom of the screen
2. Click the report that has the parameters you are going to change. You will need to go through this process for each report to which you want to add parameters.
3. Click the **Add Parameter** button.

The screenshot shows the "Add Parameter" dialog box with the following fields:

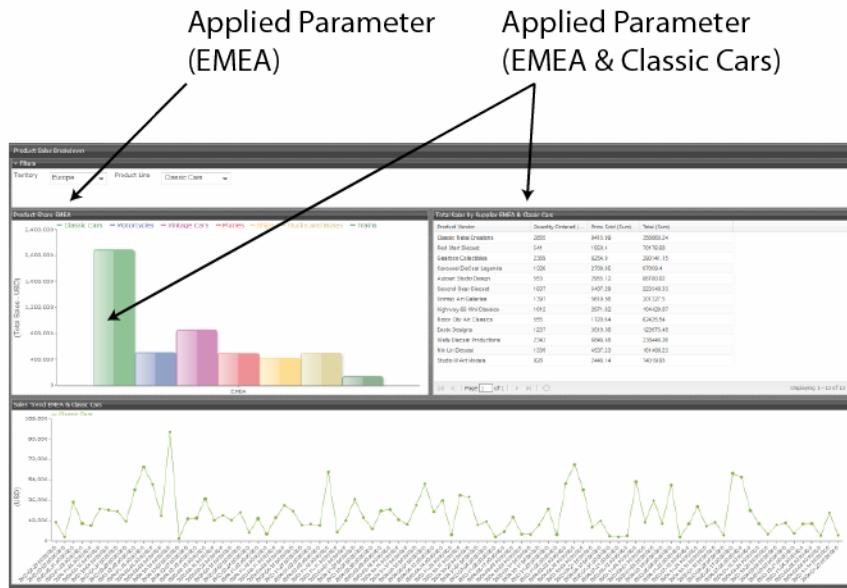

- Report: Placed Parameter
- Add Parameter Button: Parameter to be added
- Content: Product Share (Territory)
- Refresh Interval (sec): 0
- Content Linking: Territory

Annotations with arrows point to the "Report" field, the "Add Parameter" button, and the "Content" field.

Placed parameter appears after the title.

4. Click **Apply**

- Close the Edit Pane by clicking the edit (pencil) icon.

The title will now show the parameters applied to it.

Use Content Linking to Create Interactive Dashboards

Depending on your needs, you can create a "static" dashboard, which contains content in each panel that is separate but related. For example, you may provide users with a bar chart that contains total sales figures by region. Additionally, you may provide a data table that displays sales details for each state in a specific region. You may also want to provide sales data associated with each salesperson in a specific region. The content in your dashboard is useful to dashboard consumers, but to make it more "interactive," you may want to consider using *content linking*.

The content linking features in dashboards allow you to associate (link) content in one dashboard panel to content on another dashboard panel as long as query parameters have been defined. These features are particularly helpful for drilling down or for dynamic filtering; for example, when dashboard consumers explode a single slice in a pie chart to launch content in a data table associated with that pie slice. In this instance, dashboard consumers are moving from a summary view to a detailed view interactively.

You can use content linking if your dashboard panel contains a data table, chart, .xaction, .prpt, and Analyzer report.

Content Linking and Query Parameters

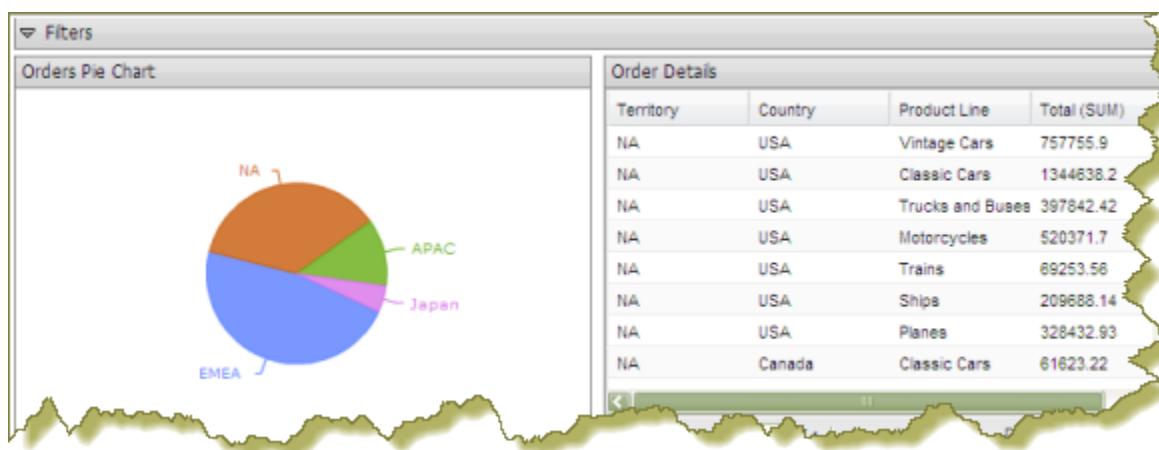

Query parameters are required for content inside a dashboard panel to receive values used to filter data from a filter control. They are also required when receiving values from content in other dashboard panels that are broadcasting values associated with Content Linking. The way in which query parameters are defined is different depending on the type of content you are placing inside your dashboard panels:

If	Then
You are defining parameters in the Analyzer ...	See Adding Query Parameters to Analyzer Reports
You are defining parameters for a chart or data table ...	Use the Query Editor to define your parameterized query. See Linking Charts and Data Tables and Linking Columns in a Data Table to Content in other Dashboard Panels

Link Charts and Data Tables

Below are general instructions for linking charts and data tables in a dashboard. This is just an example. You must adjust the instructions when working with your own data.

- Create a simple dashboard that contains a chart and a data table. At this point, none of the content has been linked and you have a "static" dashboard.

Notice the pie chart in the example above. You want dashboard consumers to click a slice (NA, APAC, Japan, EMEA) and have the data table on the right update with the values associated with that slice exclusively. For example, if a report consumer clicks the EMEA slice, the data table will display values associated with EMEA and nothing else. To get the correct filter display, you must first create a parameterized query that drives the content in the data table.

2. Click the **Edit** Button to open up the **Edit** Pane at the bottom of the screen. Within the **Objects** pane, choose the report you want to parameterize.

Parameterizing a query, as described here, allows you to pass values dynamically and update the chart based on events triggered by other elements of the dashboard such as a user choosing an item from a filter control or following links defined in content associated with another panel in the dashboard.

3. Click the {p} button next to the **Title** box.
The **parameters** will populate after the title in the **Title** box.
4. Click the **Parameters** tab and ensure that the parameters name is linking to the correct **Source**.
5. Click **Apply**.

The new source for the parameter corresponds to the title of the dashboard panel that contains the chart as shown in the example above. This new source will now drive the display in the data table.

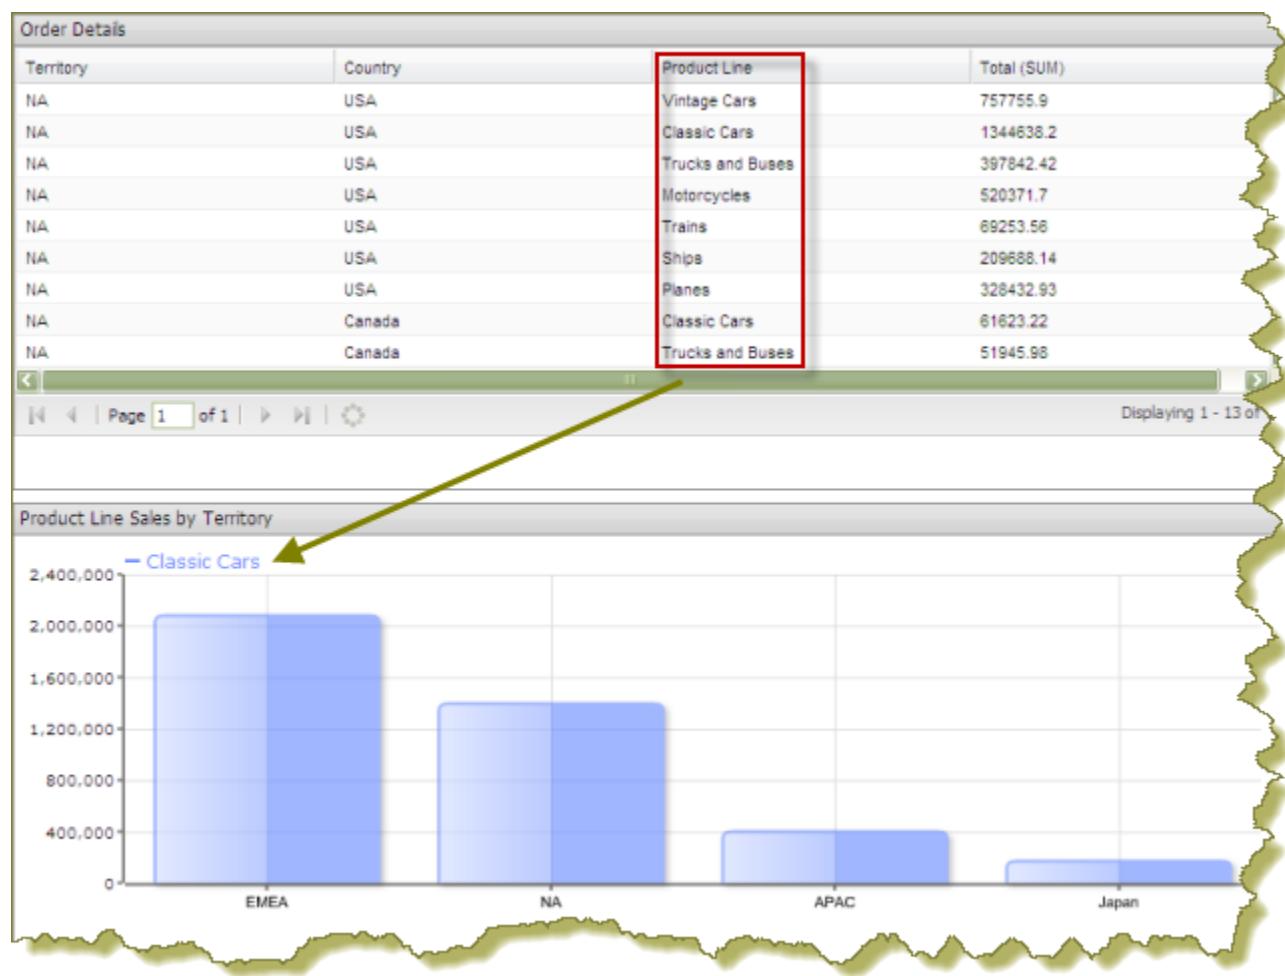

6. Click the **Edit** button (pencil icon) to exit the edit mode.
The filters will appear after the panel titles.
7. Save your dashboard. See [Saving Your Dashboard](#).

When users click a pie slice or bar in a chart, the data table displays content associated with that specific pie slice or bar. The currently applied filters appear after the title.

Link Columns in a Data Table to Content in other Dashboard Panels

The instructions that follow show you how to link a chart to a column in a data table. You must adjust the instructions when working with your own data.

1. Create a simple dashboard that contains a data table and a bar chart. At this point, none of the content has been linked and you have a "static" dashboard.

Notice the data table in the example above. You want dashboard consumers to click a product in the **Product Line** column and have the bar chart update with information about sales by territory for that specific product line.

2. Add a parameterized condition to the query for the bar chart by specifying a parameter name in curly braces in the **Value** text box; then, provide a default value for that parameter in the **Default** text box. In the example below, a parameter called **Productline** with a default value of **Classic Cars** has been created.

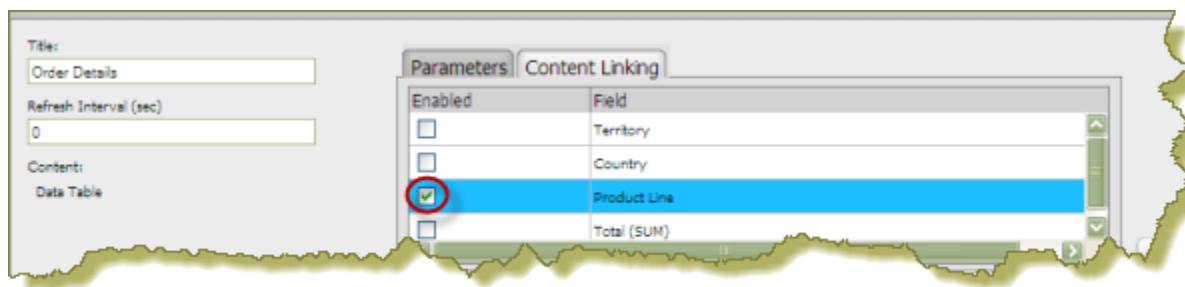

The figure shows the "Query Editor" interface. On the left is a tree view of "Categories / Columns" with nodes: Customer, Orders, Products, and Payments. To the right is a "Selected Columns:" table and a "Conditions:" table. The "Conditions:" table has a row where the "Column" is "Product Line", the "Comparison" is "exactly matches", the "Value" is "{Productline}", and the "Default" is "Classic Cars". A red box highlights this row.

Categories / Columns		Selected Columns:					
		Aggregation	Column				
<input checked="" type="checkbox"/>	Customer	NONE	Territory				
<input checked="" type="checkbox"/>	Orders	NONE	Product Line				
<input checked="" type="checkbox"/>	Products	SUM	Total				
<input checked="" type="checkbox"/>	Payments						

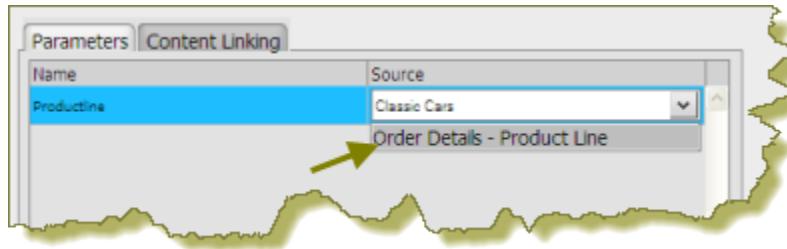

Conditions:

Line	Aggregation	Column	Comparison	Value	Default
	NONE	Product Line	exactly matches	{Productline}	Classic Cars

3. In the Chart Designer, set the data definitions for the series, category and values columns associated with your bar chart and click **OK**.
4. Under **General Settings**, choose the data table and click the **Content Linking** tab. Enable content linking on the column in your data table that will filter content in your chart. Each of the columns in a data table are able to broadcast values to other dashboard components.

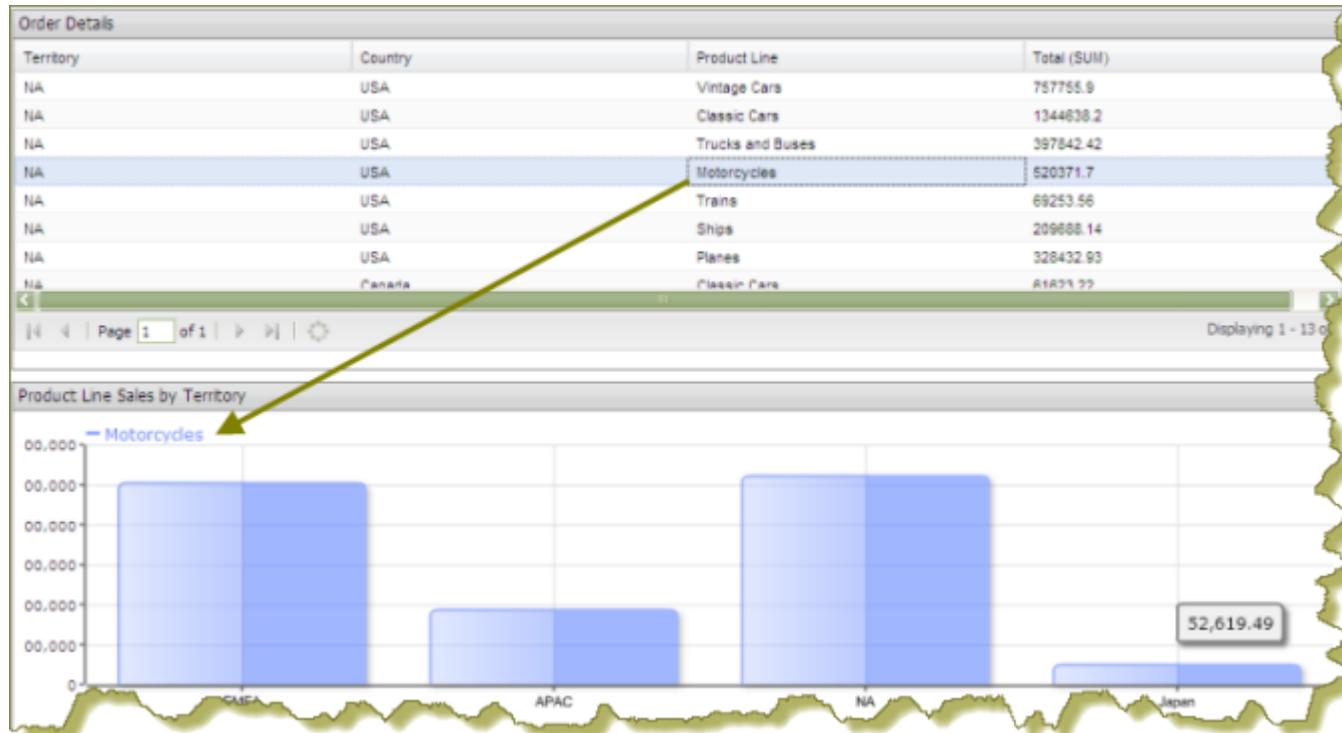

5. Under **General Settings**, choose the chart and click the **Parameters** tab. Click the down arrow, in the **Source** text box to display another source for the parameter you created. In the example below, notice that **Order Details - Product Line** , (this is the name of the dashboard panel that contains the data table), can now be selected as a source for the **Productline** parameter.

6. Save your dashboard.
7. In the data table, choose an item in the column that has content linking enabled.
The content in the chart updates in response to the item that was clicked in the data table.

In the example below, the **Product Line** column was enabled for content linking.

Create Content to Content Links in an Analyzer Report

Below are general instructions for creating content links in an Analyzer report, (inside a dashboard), that can be used to drive the *parameter values* of content in other dashboard panels. You must adjust the instructions when working with your own data.

1. Create a simple dashboard that contains an Analyzer Report and a data table. At this point, none of the content has been linked and you have a "static" dashboard.

Untitled 1

No Filter in use

Your report is ready!

Line	Classic Cars	Motorcycles	Planes	Ships	Trains	Trucks and Buses	Vintage Cars
Territory	Sales	Sales	Sales	Sales	Sales	Sales	Sales
APAC	411,956	189,818	121,426	38,393	9,907	145,666	364
EMEA	2,091,601	507,138	491,655	427,265	138,506	500,979	851
Japan	181,601	52,619	109,733	33,016	16,802	57,848	52,
NA	1,406,261	524,549	353,943	249,997	69,254	449,788	798

Untitled 2

Customer Name	City	State
American Souvenirs Inc.	New Haven	CT
Auto-Moto Classics Inc.	Brickhaven	MA
Boards & Toys Co.	Gendale	CA
Cambridge Collectables Co.	Cambridge	MA
Canadian Gift Exchange Network	Vancouver	BC
Classic Gift Ideas, Inc.	Philadelphia	PA
Classic Legends Inc.	NYC	NY
Collectable Mini Designs Co.	San Diego	CA
Collectables For Less Inc.	Brickhaven	MA
Corporate Gift Ideas Co.	San Francisco	CA
Dollars & Sense Inc.	Albuquerque	NM

In the example above, when content linking is achieved, the list of territories (APAC, EMEA, Japan, and NA) will become hyperlinks that, when clicked, will update customer details data table. To get the correct filter display, a *parameterized query* that drives the content in the data table must be created.

2. Add a parameterized condition to the query for the data table by specifying a parameter name in curly braces in the **Value/text** box; then, provide a default value for that parameter in the **Default** text box. In the example below, a parameter called **TERRITORY** with a default value of **NA** has been created.

Parameterizing a query, as described here, allows you to pass values dynamically and update the chart based on events triggered by other elements of the dashboard such as a user choosing an item from a filter control or following links defined in content associated with another panel in the dashboard.

Conditions:

Combine	Aggregation	Column	Comparison	Value	Default
NONE		Territory	exactly matches	{TERRITORY}	NA

Under **General Settings**, click the data table and examine its available parameters. In the example below, there is an available parameter called **TERRITORY** with a default source value of **NA** (North America). A drop-down arrow in the **Source** text box indicates that there are additional values to control the available parameter. In this example, there are no additional source values that control the **TERRITORY** parameter.

Title: Customer Details

Refresh Interval (sec): 0

Content: Data Table

Parameters

Name	Source
TERRITORY	NA

Content Linking

3. Under **General Settings**, choose the Analyzer report. Click the **Content Linking** tab then click the check box next to the field/column name you want enabled for content linking. Click **Apply**.

Enabled	Field
<input type="checkbox"/>	Line
<input checked="" type="checkbox"/>	Territory

In the Analyzer report, the values under the **Territory** become hyperlinks.

Territory	Line	
	Classic Cars	Motorcycles
APAC	411,956	189,818
EMEA	2,091,601	507,138
Japan	181,601	52,619
NA	1,406,261	524,549

4. Under **General Settings**, choose the data table and examine its available parameters. Notice that there is a drop-down arrow in the **Source** text box. Click the down arrow to display and choose a new source value for the available parameter. Click **Apply**.
5. Save your dashboard.

In the example below, content linking was applied. When users click a territory hyperlink in the Analyzer report, the data table updates and displays customer-related details associated with that specific territory exclusively.

Territory	Line						
	Classic Cars	Motorcycles	Planes	Ships	Trains	Trucks and Buses	Vintage Cars
APAC	411,956	189,818	121,426	38,393	9,907	145,666	364,531
EMEA	2,091,601	507,138	491,655	427,265	138,506	500,979	851,024
Japan	181,601	52,619	109,733	33,016	16,802	57,848	52,331
NA	1,406,261	524,549	353,943	249,997	69,254	449,788	798,269

Customer Details		
Customer Name	City	State
AV Stores, Co.	Manchester	null
Alpha Cognac	Toulouse	null
Amica Models & Co.	Torino	null
Atelier graphique	Nantes	null
Auto Associes & Cie.	Versailles	null
Auto Canal+ Pettit	Paris	null
Baane Mini Imports	Stavern	null
Bavarian Collectables Imports, Co.	Munich	null
Blauer See Auto, Co.	Frankfurt	null

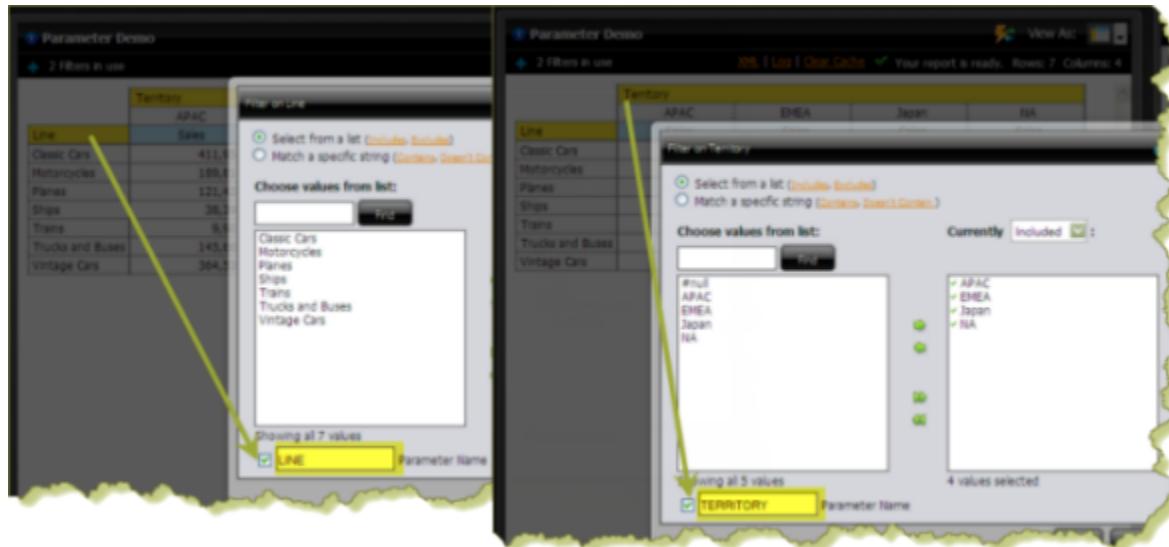

Link an Analyzer Chart to a Report

You can create content-to-content links between an Analyzer chart and any other parameterized report such as a Report Designer report, a data table, or another Analyzer report.

Below are general instructions for linking an Analyzer chart to a report. You must adjust the instructions when working with your own data.

1. Create a simple dashboard that contains an Analyzer chart and a parameterized report. The example above displays an Analyzer chart and an Analyzer Report displayed as a table view. At this point, none of the content has been linked and you have a "static" dashboard.

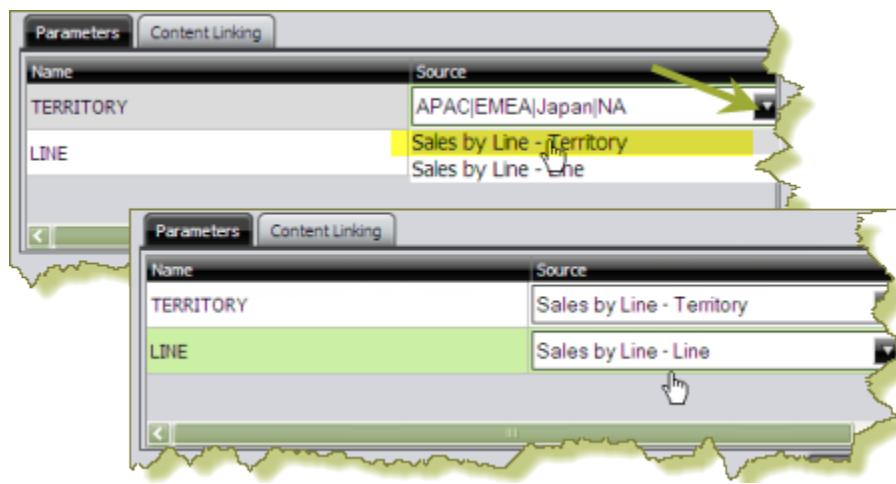

Hypothetically, if you want users to be able to click a bar in the bar chart and update the Analyzer table view, the table must contain at least one parameter. In the example below, there are two parameters, (LINE and TERRITORY), associated with the Analyzer table.

2. Under **General Settings**, choose the Analyzer chart. Click the **Content Linking** tab then click the check box (or check boxes) next to the field/column name you want enabled for content linking. Click **Apply**.

3. Under General Settings, choose the Analyzer Report (table view) and click the **Parameters** tab. Click the down arrow, in the **Source** text box to display another source for the parameters you created. In the example below, notice that **Sales by Line**, (this is the name of the dashboard panel that contains the chart), can now be selected as a source for both the TERRITORY and LINE parameters.

4. Save your dashboard. See [Saving Dashboards](#) for steps.

In this example, content linking is applied when users click a bar in the bar chart. The data table updates and displays sales details for a product line in a specific territory.

Control a Dashboard Parameter From a PRPT Hyperlink

You must have a report (.prpt) that contains a hyperlink before you can complete this task. See the [Design Print-Quality Reports](#) section for instructions about adding hyperlinks to a report.

The instructions that follow show you how a link inside a Report Designer report (.prpt) can drive a parameter in content on another dashboard panel. You must adjust the instructions when working with your own data.

1. Create a simple dashboard that contains a .prpt report and a data table. At this point, none of the content has been linked and you have a "static" dashboard.

The screenshot shows a dashboard with two main sections. At the top, there is a list of territories: APAC, EMEA, Japan, and NA. A yellow arrow points from the 'APAC' link down to a data table below. The data table is titled 'Customer Sales by Territory' and contains the following data:

Product Line	Customer Number	Total (SUM)	Territory
Classic Cars	103	16560.3	EMEA
Motorcycles	103	5307.98	EMEA
Vintage Cars	103	2311.68	EMEA
Motorcycles	119	48325.29	EMEA
Planes	119	53515.43	EMEA
Vintage Cars	119	16043.54	EMEA
Ships	119	15035.99	EMEA
Classic Cars	119	22031.68	EMEA
Trucks and Buses	119	25173.01	EMEA
Classics		28813.72	EMEA

Notice the report (.prpt) in the example above. You want dashboard consumers to click a territory (APAC, EMEA, etc.), hyperlink and have the data table update with information about that territory specifically.

- Under **General Settings**, choose the report (.prpt) and click the **Content Linking** tab. Click the checkbox next to the field you want used for content linking.
- Add a parameterized condition to the query for the data table by specifying a parameter name in curly braces in the **Value** text box; then, provide a default value for that parameter in the **Default** text box. In the example below, a parameter called **TERRITORY** with a default value of **NA** has been created.

The screenshot shows the 'Conditions' dialog box for a parameter named 'Territory'. The condition is set to 'exactly matches' the value '{TERRITORY}' with a default value of 'NA'.

Combine	Aggregation	Column	Comparison	Value	Default
<input type="button" value="NONE"/>	<input type="button" value="Territory"/>	Territory	exactly matches	{TERRITORY}	NA

Parameterizing a query, as described here, allows you to pass values dynamically and update the data table based on events triggered by other elements of the dashboard such as a user choosing an item from a filter control or following links defined in content associated with another panel in the dashboard.

- Under **General Settings**, choose the data table and click the **Content Linking** tab. Click the drop-down arrow, in the **Source** text box to display another source for the parameter you created. In the example below, notice that **Product Line Share by Territory - Territory** , (this is the name of the dashboard panel that contains the .prpt), is now selected as a source for the **Territory** parameter.

The screenshot shows the 'Content Linking' dialog box for the 'Customer Sales by Territory' data table. It lists a single parameter 'Territory' with its source set to 'Product Line Share by Territory - Territory'.

Name	Source
Territory	Product Line Share by Territory - Territory

- Save your dashboard. See [Saving Dashboards](#).

When content linking is achieved, the data table updates when a link in the report (.prpt) is clicked as shown in the example below.

Product Line	Customer Number	Total (SUM)	Territory
Classic Cars	148	81217.91	Japan
Vintage Cars	148	15663.72	Japan
Trains	148	13278.71	Japan
Ships	148	14155.52	Japan
Trucks and Buses	148	4507.02	Japan

Add Content to a Dashboard Using Drag-and-Drop

Use these steps to add an existing chart, table, or file to your dashboard panels using the drag-and-drop feature.

1. Create a new dashboard. See [Creating a New Dashboard](#) for specific instructions.
2. In the left pane of the Pentaho User Console, under **Files**, locate to the content (chart, table, or file) you want added to your dashboard.
3. Click and drag the content into a blank panel on your dashboard. You will see the "title" of the content as you move it around the dashboard. Notice that the title background is red; it turns green when you find a panel where the content can be dropped.

Repeat steps 2 and 3 until your dashboard contains all the content you want to display. To swap content from one panel to another, click the title bar of the panel that contains the content you want moved and drag it over the panel you want swapped. You will see the swap icon as you are moving the content.

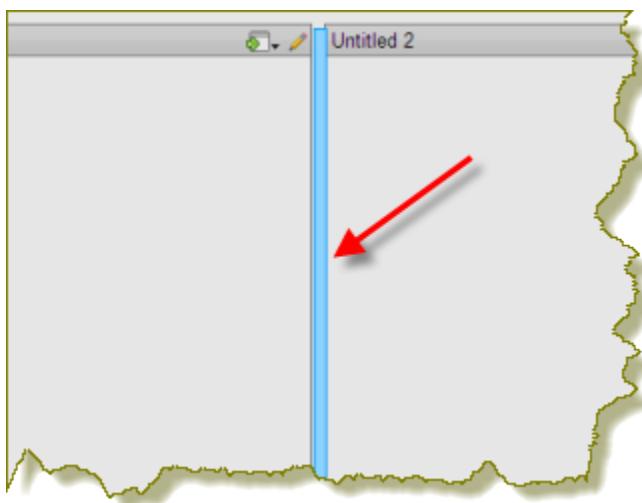

If you are working with an existing dashboard, you can perform steps 2 and 3 steps; however, a warning message appears when you try to place content in a panel that already contains content. The new content will override the existing content.

4. Save your dashboard.

Adjust White space in Dashboard Panels

Sometimes you must adjust the white space in dashboard panels, (or the filter panel), so that content appears correctly. Use these steps to adjust white space.

1. Open an existing dashboard.
2. In the lower pane, click **General Settings** and then click the **Properties** tab.
3. Click **Resize Panels**.
The white space between the dashboard panels turns blue.
4. Adjust the panel size by clicking and holding the left mouse button down as you move the blue lines (white space) around. Release the mouse button when you are satisfied with the positioning of the panel.

5. Click **Close** in the lower-right corner of the dashboard to exit resize layout mode.
6. Examine the dashboard contents to make sure they are placed correctly. You can return to the resize layout mode if you need to make additional changes.
7. Save your dashboard.

Set the Refresh Interval

The content in your dashboard may need to be refreshed periodically if users are examining real-time data. You can set refresh intervals for individual panels on your dashboard or for the entire dashboard.

To set the refresh interval for *individual panels* in the dashboard, click the edit button and the choose the panel that contains the content you want refreshed in the **Objects** panel . Under **Refresh Interval (sec)** enter the interval time in seconds and click **Apply**.

If you want the *entire dashboard* to refresh, click the **Prompts** tab in the dashboard and set your refresh interval.

Use Pentaho Mobile

Get immediate access to powerful business analysis at any time with Pentaho Mobile, an innovative application built specifically for the Apple iPad. Touch navigation technology enables you to access content with the tap of a finger.

Set Up Mobile Access

To get access to Pentaho Mobile, you must

1. Ensure that an administrator installs the Pentaho Mobile license key along with the Pentaho license keys for Pentaho Business Analytics software. See *Configure Pentaho Systems* for more information.
2. Have an Internet connection.
3. Obtain the Pentaho server IP address or host name from your administrator and enter it into the iPad Safari web browser. For example, `http://<hostname>:8080`.

Get Started with Pentaho Mobile

Once you have access to Pentaho Mobile, log in with the same user name and password you use for the User Console. Logging in enables you to view and create reports. If you have permission, you can also edit Pentaho Analyzer reports.

After accessing Pentaho Mobile, a dialog box appears. If you choose to toggle **Yes** for the **Remember me on this device** prompt, the prompt does not appear the next time you access Pentaho Mobile from that iPad. You can change this by going to **Settings**.

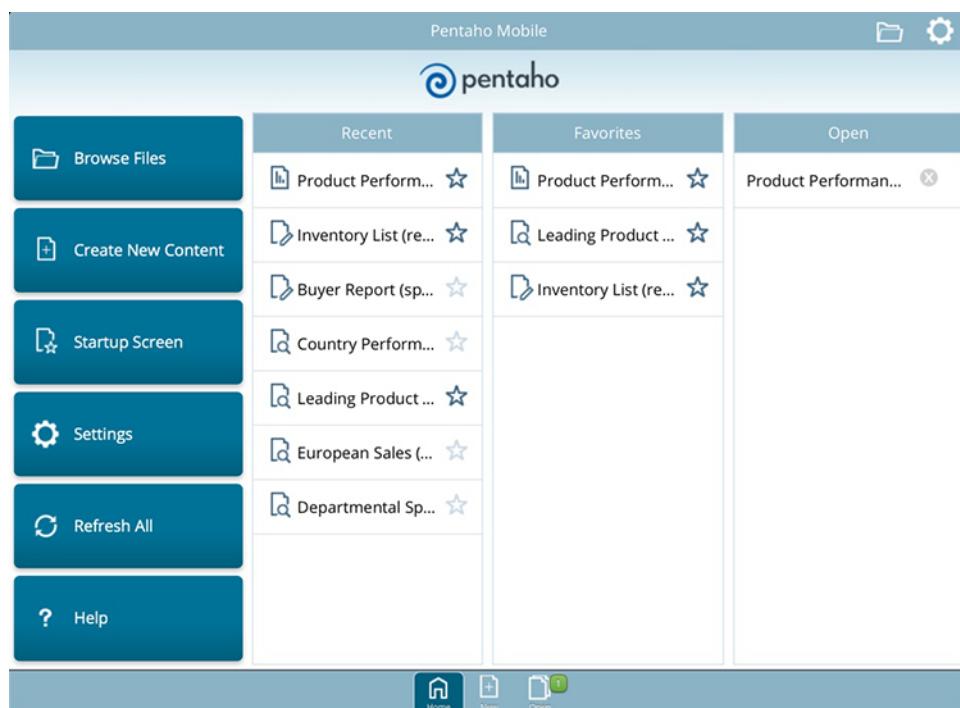

Create a Shortcut Using Safari

When you view Pentaho Mobile in the Safari browser, the browser toolbars take up some of the viewing area. To obtain the maximum viewing area, and to launch Pentaho Mobile from your iPad Home screen, create a shortcut.

1. Open Pentaho Mobile.
2. Tap the **Share**  button.
3. Tap **Add to Home Screen**.
4. Enter an alternate name, or keep the name **PentahoMobile**, and tap the **Add** button.
A shortcut appears on the iPad Home screen. The next time you launch from the shortcut, you will have a maximized viewing area.

Work with the Home Screen

Before you start using Pentaho Mobile, take a quick tour of the interface and basic navigation.

The **Home** screen is divided into three panels.

Recent	This panel displays a list of the last ten files you have opened with Pentaho Mobile and the Pentaho User Console. You can change the maximum number of file names that appear by going to Settings .
Favorites	This panel displays a list of the files marked as favorites.
Opened Files	This panel displays a list of files that are currently open.

Using the buttons on the Home screen, you can navigate to and select files that contain the content you want to view. You can also perform other actions.

Browse Files	Browse files saved on the Pentaho Analysis Server.
Create New Content	Create a new Pentaho Analyzer report.
Startup Screen	Open the file you have selected to load when Pentaho Mobile launches. If you want to edit this selection, tap Settings .
Settings	Specify options for configuring Pentaho Mobile.
Refresh All	Refresh the Recents , Favorites , and Open Files lists.
Help	Access the Pentaho Mobile documentation.

There are three buttons at the bottom of the screen.

Home	Instantly navigate to the Home screen.
New	This button displays if you have permission to create new Analyzer reports.
Open	View a list of open files. The number of open files appears as a badge on the icon. You can also use this button to close files by tapping the X that is located after the file name. If no files are open, the Browse option appears so you can select a file to open.

Navigate Files

Browsing Files

To select a file and load its viewable content, tap the **Browse Files**  button. Then tap either **All**, **Favorites**, or **Recent** and select the file that has the content you want to view. The file loads in your screen.

Moving Between Files

If you have several files open, you can navigate between them by tapping **Open** at the bottom of the screen. All of the open files appear and you can select the one you want to view.

Closing Files

To close a file, tap the **X** in the **Open Files** list.

Create and Remove Favorites

Marking a file as a favorite makes it easier to find. Favorites appear on the **Home** screen and in the **Favorites** tab when you tap on **Browse**.

Creating Favorites

To mark a file as a favorite, tap the star. The star turns bold, indicating it is a favorite.

Removing Favorites

To remove the favorite status from a file, tap the bold star. The star is no longer bold, indicating that the file is not a favorite.

Change Settings

If you want to change your settings, tap the **Settings**  button. You will find these options while in **Settings**.

Startup Screen

Change the **Startup Screen** to load with a file instead of the default **Home** screen. To load a file on startup, tap **Select a file**, navigate to the correct file, and select it. The selected file appears in the **Startup Screen** list with a highlighted option button. If you want to make the Pentaho **Home** screen the startup screen again, tap the **Pentaho Default Home** option button.

Recent Files

To change the number of recent files tap the plus or minus next to **Keep The Last**. You can also tap **Clear All Recent Files**.

Clearing Favorites and Settings

To clear favorites and settings for Pentaho Mobile:

- Tap **Clear All Favorites** to clear your favorites list.
- Tap **Reset All Settings** to reset all of your settings, including local storage, such as saved password settings and dialog preferences. **Reset All Settings** also clears the **Recents** list in the Pentaho User Console.

Help

This content appears when you tap **Help**.

Pentaho Mobile Information

Tap **About Pentaho Mobile** for product information, such as version number.

Password Protection

To specify whether or not your password is saved, tap **Remember me on this device** and toggle the switch to **Yes** or **No**. You will automatically be signed in when you start Pentaho Mobile.

Logout

Tap **Logout** to end your session of Pentaho Mobile.

Work with Pentaho Mobile Tools

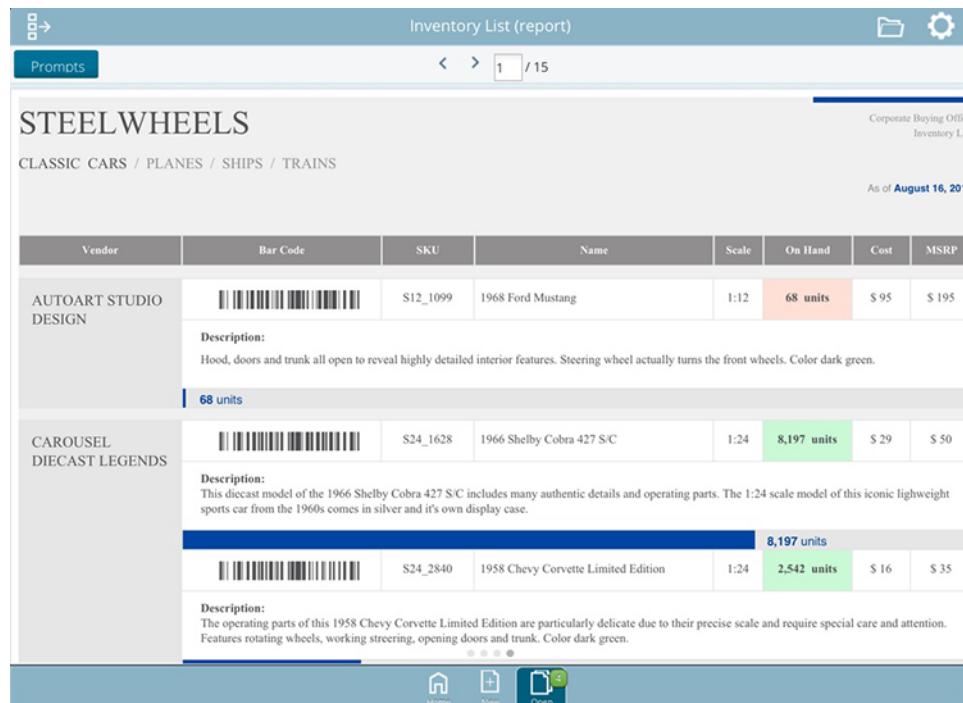

You can view previously created files using Pentaho Mobile. You may feel familiar with the experience of Pentaho Mobile if you have used the User Console. If you have not used the console, you can view the *Tour the User Console* to familiarize yourself with its capabilities. The *Tour* is available on the [Pentaho InfoCenter](#), which is best viewed from your desktop web browser.

Pentaho Mobile responds to the standard iOS device gestures and changes in orientation.

Use the Overlay Toolbar

The Overlay Toolbar is a content-driven toolbar that allows you to easily perform common actions. For all content, you can tap **Overlay Toolbar**  to create **Favorites**, **Refresh** content, or **Close** content. For Analyzer Reports, you can also **Save** and **Save As** if your administrator has given you permission.

Mobile Reports

The screenshot shows a mobile application interface for a report titled "Inventory List (report)". The top navigation bar includes icons for back, forward, and search, along with a file and settings gear icon. Below the title, there's a section labeled "Prompts". The main content area displays a table of products under the heading "STEELWHEELS". The table columns are: Vendor, Bar Code, SKU, Name, Scale, On Hand, Cost, and MSRP. The first row shows a product from "AUTOART STUDIO DESIGN" with the following details:

AUTOART STUDIO DESIGN		S12_1099	1968 Ford Mustang	1:12	68 units	\$ 95	\$ 195
-----------------------	---	----------	-------------------	------	----------	-------	--------

Description:
Hood, doors and trunk all open to reveal highly detailed interior features. Steering wheel actually turns the front wheels. Color dark green.

68 units

The second row shows a product from "CAROUSEL DIECAST LEGENDS" with the following details:

CAROUSEL DIECAST LEGENDS		S24_1628	1966 Shelby Cobra 427 S/C	1:24	8,197 units	\$ 29	\$ 50
--------------------------	---	----------	---------------------------	------	-------------	-------	-------

Description:
This diecast model of the 1966 Shelby Cobra 427 S/C includes many authentic details and operating parts. The 1:24 scale model of this iconic lightweight sports car from the 1960s comes in silver and it's own display case.

8,197 units

The third row shows a product with the following details:

		S24_2840	1958 Chevy Corvette Limited Edition	1:24	2,542 units	\$ 16	\$ 35
--	---	----------	-------------------------------------	------	-------------	-------	-------

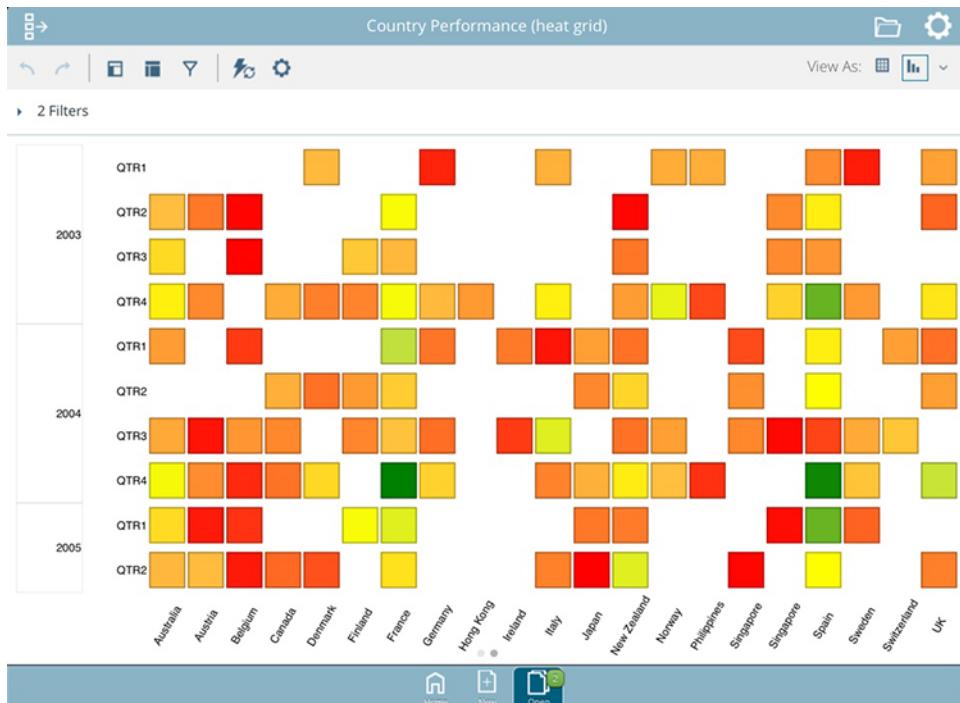

Description:
The operating parts of this 1958 Chevy Corvette Limited Edition are particularly delicate due to their precise scale and require special care and attention. Features rotating wheels, working steering, opening doors and trunk. Color dark green.

2,542 units

At the bottom of the screen, there are three icons: a house icon for "Home", a plus sign icon for "New", and a document icon for "Open".

You can view reports that were created with the desktop version of Pentaho Interactive Reporting or Pentaho Report Designer. If you need more information, see the *Build Full-Featured Solutions* and the *Design Print-Quality Reports* sections on the [Pentaho InfoCenter](#).

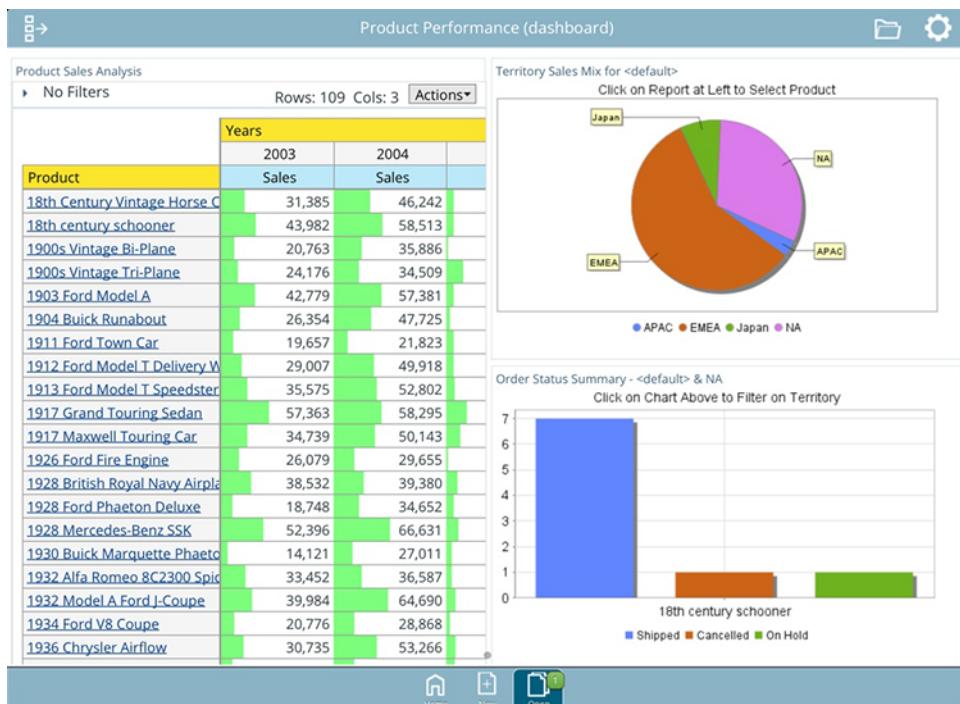

Mobile Analyzer

You can view and edit Analyzer reports using Pentaho Mobile. Previously created content opens in view mode, with the design panels closed. If you would like to edit a report, you can use the icons on the toolbar to access the design panels.

If you need more information about how to view and edit Analyzer Reports, see the *Build Full-Featured Solutions* section on the [Pentaho InfoCenter](#).

Mobile Dashboards

You can view dashboards created with the Dashboard Designer. You may want to optimize your dashboards for the mobile environment by selecting layout templates that are better for smaller screen sizes and avoiding Flash charts since the iPad does not support Flash. If you choose to view a Flash chart on Pentaho Mobile, it converts to a static image.

If you need more information about how to create Dashboards, see the *Build Full-Featured Solutions* section on the [Pentaho InfoCenter](#).

Schedule Reports

You can use the [Schedules page](#) of the **User Console** to schedule a report to run at regular intervals, on certain dates and times, and with different parameters. You can also set a scheduled report to be emailed automatically, if your system administrator has configured the server for emailing reports. After you schedule a report, you can pause or delete a schedule, as well as edit the schedule to change the frequency of the report, parameters, or email settings.

The system administrator may set up times when you cannot run a scheduled report, for example, to perform system maintenance, or to minimize scheduling during peak times. If any blocked out times are set up, you can view these times so you can choose an alternate schedule.

Here is how you can work with schedules.

- [Schedule a Report](#)
- [Edit a Schedule](#)
- [Delete a Schedule](#)

Schedule a Report

You can create a schedule and designate the frequency of the scheduled report, report parameters, and email settings.

1. Login to the User Console, and click **Browse Files** to browse to the location of your report.
2. Double-click the folder containing your report in the **Browsing** pane on the left, then click to select the report you want to schedule from the middle pane.
The **File Actions** pane on the right of the **Browse Files** window populates with a list of actions that you can do with the selected report.
3. Select **Schedule** from the **File Actions** pane.
The **New Schedule** window appears.
4. Enter a name for the schedule in the **Schedule Name** field.
If no name is entered in the **Schedule Name** field, the default is the name of the report file.
5. Choose a time interval for the report from the **Recurrence** list. To enter a custom time interval, choose **Cron** and consult [the Quartz reference](#) to learn the Quartz Cron syntax.
If blackout times have been scheduled by your administrator, a **View Blockout Times** button appears on the bottom of the **New Schedule** window. A list of blackout times is viewable by clicking **View Blockout Times**.
6. Choose a **Start Time** and a **Recurrence Pattern**, as well as **Start** and **End Dates** for the report. Click **Next**.
7. Choose what type of file you would like the schedule to create from the **Parameters** field. Click **Next**.
The email option will only appear if your system administrator has enabled email on the server.
 - a) If you do not want to email a copy of the report, choose **No**.
 - b) If you want to email a copy of the report, choose **Yes**. Type to fill in or edit the fields that appear.
8. Click **OK**.

The schedule is created and appears in the list in the **Schedules** window of the console.

Edit a Schedule

You can edit a schedule to change the frequency of the scheduled report, report parameters, and email settings.

1. Click the **Home** drop-down menu on the upper-left and click the link to the **Schedules**.
The list of schedules appears in the **Schedules** page.
2. Click the schedule you want to edit in the list, then click **Edit** in the scheduling toolbar.
The **Edit Schedule** window appears.
3. Type to rename the schedule in the **Schedule Name** field.
4. Choose a new time interval for the report from the **Recurrence** list.
5. Choose a new **Start Time** and **Recurrence Pattern**, as well as new **Start** and **End Dates** for the schedule. Click **Next**.

If blackout times have been scheduled by your administrator, a **View Blockout Times** button appears on the bottom of the **New Schedule** window. A list of blackout times is viewable by clicking **View Blockout Times**.

6. Choose what type of file you would like the schedule to create from the **Parameters** field. Click **Next**.

The email option will only appear if your system administrator has enabled email on the server.

a) If you do not want to email a copy of the report, choose **No**.

a) If you want to email a copy of the report, choose **Yes**. Type to fill in or edit the fields that appear.

7. Click **OK**.

The schedule is edited and appears in the list in the **Schedules** window of the console.

Delete a Schedule

After you have scheduled a report, you can easily delete the schedule without deleting the report.

1. Click the **Home** drop-down menu on the upper-left and click the link to **Schedules**.

The list of schedules appears in the **Schedules** page.

2. Click the schedule that you want to delete in the list.

The schedule is highlighted.

3. Click **Delete** in the upper right of the toolbar to delete the highlighted schedule.

This deletes the schedule while leaving the report intact.

The previously scheduled report no longer runs at the specified interval.

Quartz Cron Attributes

The Quartz cron engine supports a seven-attribute time declaration with many possible values. The number format is the same for every expression, even if the values are different -- it must be listed as seconds, minutes, hours, day of month, month, day of week, then the year. A space separates each attribute.

These are the possible values for each attribute: 0 to 59 for seconds and minutes, 0 to 23 for hours, 1 to 31 for days, 1 to 12 for months, 1 to 7 for day of week, and a four-digit year. Alternatively, you can use three-letter values for the day of week (MON, TUE, WED, THU, FRI, SAT, SUN), and three-letter values for the month (JAN, FEB, MAR, APR, MAY, JUN, JUL, AUG, SEP, OCT, NOV, DEC).

An asterisk (*) indicates *all values*, so an asterisk in the minute field would mean that the report runs once every minute. You can specify a range of values with the - (dash) operator, and you can specify multiple individual values with a comma. If you need to exclude a value in the day of month and day of week field from a cron job, you can use the question mark (?) character to indicate that this value doesn't matter. If you need to split values, you can do so with the slash (/) character -- this operator literally means "every," so */15 would mean "Every 15." In the day of month field, you can use the # character to indicate a certain instance of a day of the month, for instance the second Friday of the month would be 6#2. Lastly, you can use a capital L in the day of month and day of week field to indicate "Last," as in the last day of the week. A capital C in either of these fields means "Calendar," and combined with a number means that the report should execute at the interval indicated by the C number according to the loaded calendar. A capital W in the day of month attribute means "Weekday," which only encompasses Monday through Friday. Most of these values can be combined to create unusual cron schedules.

Attribute	Conditionals and Operators
Seconds	, - * /
Minutes	, - * /
Hours	, - * /
Day of month	, - * ? / L W C
Month	, - * /
Day of week	, - * ? / L C #
Year	, - * /

Here is how you would execute a report at 10:15 AM on every last Friday of every month during the years 2008, 2009, 2010, 2011, 2012, and 2013.

```
0 15 10 ? * 6L 2008-2013
```
